Financing Transit with Land Values - Hiroaki Suzuki 2014-06

Cities in developing countries are experiencing unprecedented urban growth. Unfortunately, this is often accompanied by the negative impacts of sprawl as a result of rapid motorization such as congestion, air pollution, greenhouse gas emissions, inefficient use of energy and time, and unequal accessibility. As these cities are often under severe fiscal

constraints, they face great challenges in financing capital-intensive mass transit systems to reverse the course of these negative trends. Development-based land value capture (DBLVC) financing schemes being practiced in Asian megacities like Hong Kong SAR, China, and Tokyo have helped them not only to generate funds for transit investment and operational and maintenance costs but also to promote sustainable urban development through transit-oriented development (TOD). Many rapidly growing cities in developing countries have the conditions for introducing DBLVC - namely, strong economic growth, rising real incomes and increased motorization and congestion levels - all of which cause land value appreciation within proximity of transit stations or corridors. If adapted well to local contexts, DBLVC schemes have great potential to become an important strategic apparatus of urban finance and planning for cities in developing countries. Through a careful analysis of various case

studies, this book provides strategies, policies, and methodologies that policy makers and practitioners can apply in developing their own DBLVC schemes for transit financing.

Regenerating Urban Land - Rana Amirtahmasebi
2016-06-02

Regenerating Urban Land draws on the experience of eight case studies from around the world. The case studies outline various policy and financial instruments to attract private sector investment in urban regeneration of underutilized and unutilized areas and the requisite infrastructure improvements. In particular, each case study details the project cycle, from the scoping phase and determination of the initial amount of public sector investment, to implementation and subsequent leveraged private-sector funds. This manual analyzes rates of return on the investments and long-term financial sustainability. Regenerating Urban Land guides local governments to systematically identify the sequence of steps and tasks needed

to develop a regeneration policy framework, with the participation of the private sector. The manual also formulates specific policies and instruments for expanding private sector participation; structuring effective administrative and legal frameworks; utilizing land readjustment/assembly methods; determining duration of contracts, adequate phasing, and timeline; and balancing the distribution of risk and sustainability measures.
