Fluent Forever - Gabriel Wyner 2014-08-05

NATIONAL BESTSELLER • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. “A brilliant and thoroughly modern guide to learning new languages.”—Gary Marcus, cognitive psychologist and author of the New York Times bestseller *Gun Zero* At thirty years old, Gabriel Wyner speaks six languages fluently. He didn’t learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he’s discovered. Starting with pronunciation, you’ll learn how to rewire your ears and turn foreign sounds into familiar sounds. You’ll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you’ll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you’ll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

A World Without Email - Cal Newport 2021-03-02

New York Times bestseller! From New York Times bestselling author Cal Newport comes a bold vision for liberating workers from the tyranny of the inbox--and unleashing a new era of productivity. Modern knowledge workers communicate constantly. Their days are defined by a relentless barrage of incoming messages and back-and-forth digital conversations--a state of constant, anxious chatter in which nobody can disconnect, and so nobody has the cognitive bandwidth to perform substantive work. There was a time when tools like email felt cutting edge, but a thorough review of current evidence reveals that the "hyperactive hive mind" workflow they helped create has become a productivity disaster, reducing profitability and perhaps even slowing overall economic growth. Equally worrisome, it makes us miserable. Humans are simply not wired for constant digital communication. We have become so used to an inbox-driven workday that it's hard to imagine alternatives. But they do exist. Drawing on years of investigative reporting, author and computer science professor Cal Newport makes the case that our current approach to work is broken, then lays out a series of principles and concrete instructions for fixing it. In *A World without Email*, he argues for a workplace in which clear processes--not haphazard messaging--define how tasks are identified, assigned and reviewed. Each person works on fewer things (but does them better), and aggressive investment in support reduces the ever-increasing burden of administrative tasks. Above all else, important communication is streamlined, and inboxes and chat channels are no longer central to how work unfolds. The knowledge sector's evolution beyond the hyperactive hive mind is inevitable. The question is not whether a world without email is coming (it is), but whether you'll be

ahead of this trend. If you're a CEO seeking a competitive edge, an entrepreneur convinced your productivity could be higher, or an employee exhausted by your inbox, *A World Without Email* will convince you that the time has come for bold changes, and will walk you through exactly how to make them happen.

The Social Study of Information and Communication Technology - Frank Land
2004-06-17

This book is a useful text for advanced students of MIS and ICT courses, and for those studying ICT in related areas: Management and Organization Studies, Cultural Studies, and Technology and Innovation. As ICTs permeate every sphere of society - business, education, leisure, government, etc. - it is important to reflect the character and complexity of the interaction between people and computers, between society and technology. For example, the user may represent a much broader set of actors than 'the user' conventionally found in many texts: the operator, the customer, the citizen, the gendered individual, the entrepreneur, the 'poor', the student. Each actor uses ICT in different ways. This book examines these issues, deploying a number of methods such as Actor Network Theory, Socio-Technical Systems, and phenomenological approaches. Management concerns about strategy and productivity are covered together with issues of power, politics, and globalization. Topics range from long-standing themes in the study of IT in organizations such as implementation, strategy, and evaluation, to general analysis of IT as socio-economic change. A distinguished group of contributors, including Bruno Latour, Saskia Sassen, Robert Galliers, Frank Land, Ian Angel, and Richard Boland, offer the reader a rich set of perspectives and ideas on the relationship between ICT and society, organizational knowledge and innovation.

How to Be a High School Superstar - Cal Newport
2010-07-27

Do Less, Live More, Get Accepted What if getting into your reach schools didn't require four years of excessive A.P. classes, overwhelming activity schedules, and constant stress? In *How to Be a High School Superstar*, Cal Newport explores the world of relaxed superstars—students who scored spots at the

nation's top colleges by leading uncluttered, low stress, and authentic lives. Drawing from extensive interviews and cutting-edge science, Newport explains the surprising truths behind these superstars' mixture of happiness and admissions success, including:

- Why doing less is the foundation for becoming more impressive.
- Why demonstrating passion is meaningless, but being interesting is crucial.
- Why accomplishments that are hard to explain are better than accomplishments that are hard to do.

These insights are accompanied by step-by-step instructions to help any student adopt the relaxed superstar lifestyle—proving that getting into college doesn't have to be a chore to survive, but instead can be the reward for living a genuinely interesting life.

Big Brain Book - Leanne Boucher Gill
2021-06-01

KIDS' BOOK CHOICE AWARDS FINALIST!
Readers are welcomed to the Lobe Labs and Dr. Brain activities in this brightly illustrated, highly engaging book that uses science to answer interesting questions that kids have about the brain and human behavior. This is a fun primer on psychology and neuroscience that makes complex psychological phenomenon and neural mechanisms relatable to kids through illustrations, interesting factoids, and more. Chapters include: What is the brain made up of and how does it work? Why can't I tickle myself? Why do they shine a light in my eyes when I hit my head in the game? Answers draw from both psychology and neuroscience, giving ample examples of how the science is relevant to the question and to the reader's life experiences.

Ultralearning - Scott Young
2019-08-06
Now a Wall Street Journal bestseller. Learn a new talent, stay relevant, reinvent yourself, and adapt to whatever the workplace throws your way. Ultralearning offers nine principles to

master hard skills quickly. This is the essential guide to future-proof your career and maximize your competitive advantage through self-education. In these tumultuous times of economic and technological change, staying ahead depends on continual self-education—a lifelong mastery of fresh ideas, subjects, and skills. If you want to accomplish more and stand apart from everyone else, you need to become an ultralearner. The challenge of learning new skills is that you think you already know how best to learn, as you did as a student, so you rerun old routines and old ways of solving problems. To counter that, Ultralearning offers powerful strategies to break you out of those mental ruts and introduces new training methods to help you push through to higher levels of retention. Scott H. Young incorporates the latest research about the most effective learning methods and the stories of other ultralearners like himself—among them Benjamin Franklin, chess grandmaster Judit Polgár, and Nobel laureate physicist Richard Feynman, as well as a host of others, such as little-known modern polymath Nigel Richards, who won the French World Scrabble Championship—without knowing French. Young documents the methods he and others have used to acquire knowledge and shows that, far from being an obscure skill limited to aggressive autodidacts, ultralearning is a powerful tool anyone can use to improve their career, studies, and life. Ultralearning explores this fascinating subculture, shares a proven framework for a successful ultralearning project, and offers insights into how you can organize and execute a plan to learn anything deeply and quickly, without teachers or budget-busting tuition costs. Whether the goal is to be fluent in a language (or ten languages), earn the equivalent of a college degree in a fraction of the time, or master multiple tools to build a product or business from the ground up, the principles in Ultralearning will guide you to success.

Hacking the Common Core - Michael Fisher,

(In 2016-02-19

There Is Nothing Common About This Common Core Book It's finally here: a book that unravels the Common Core State Standards, exposes the myths, and shows educators and parents exactly how to bring back the fun to teaching and learning—even in a standardized world. In "Hacking the Common Core," longtime teacher and CCSS specialist Michael Fisher reveals 10 amazing hacks for teaching the Core in all subjects. The Common Core Is Not Evil, but. . . Fisher explains how the CCSS are not evil, while demonstrating their limitations, particularly when teachers trust a vendor product over their own professionalism. Getting to the CORE of contemporary instructional practice and undoing the mass hysteria following the Common Core implementation are both the heart of this book. What All Education Stakeholders Will Learn How to bring literature back to the classroom The truth about close reading What the instructional shifts really mean for instructional design Why we must ditch "Rigor" in favor of "Vigor" How to fix vocabulary with "Morecabulary" How to upgrade the verb The problem with the one-size-fits-all mentality Why parents need to understand the Common Core Change How You Teach "Hacking the Common Core" is the book that every teacher who feels handcuffed by standards and testing has been waiting for. It's time to take back your class, engage all learners, and be amazing for your students. The Hack Learning Formula The Hack Learning Series formula is perfect for Hacking the Common Core. Forget everything you've heard about standardization and the Core. Fisher throws out or upgrades most information and strategies, and in classic Hack Learning style, he gives you: The Problem (a single writing issue that needs a Hacker's mentality) The Hack (a ridiculously easy solution that you've likely never considered) What You Can Do Tomorrow (no waiting necessary; you can make writing immediately) Blueprint for Full Implementation (a step-by-step action plan for capacity building) The Hack in Action (yes, people have actually done this) Are you ready to bring the fun back to learning? What I Talk About When I Talk About Running - Haruki Murakami 2009-08-11

From the best-selling author of The Wind-Up

Bird Chronicle and After Dark, a rich and revelatory memoir about writing and running, and the integral impact both have made on his life. In 1982, having sold his jazz bar to devote himself to writing, Haruki Murakami began running to keep fit. A year later, he'd completed a solo course from Athens to Marathon, and now, after dozens of such races, not to mention triathlons and a slew of critically acclaimed books, he reflects upon the influence the sport has had on his life and—even more important—on his writing. Equal parts training log, travelogue, and reminiscence, this revealing memoir covers his four-month preparation for the 2005 New York City Marathon and includes settings ranging from Tokyo's Jingu Gaien gardens, where he once shared the course with an Olympian, to the Charles River in Boston among young women who outpace him. Through this marvellous lens of sport emerges a cornucopia of memories and insights: the eureka moment when he decided to become a writer, his greatest triumphs and disappointments, his passion for vintage LPs, and the experience, after the age of fifty, of seeing his race times improve and then fall back. By turns funny and sobering, playful and philosophical, *What I Talk About When I Talk About Running* is both for fans of this masterful yet guardedly private writer and for the exploding population of athletes who find similar satisfaction in distance running.

Learn Like a Pro - Barbara Oakley PhD
2021-06-01

A book for learners of all ages containing the best and most updated advice on learning from neuroscience and cognitive psychology. Do you spend too much time learning with disappointing results? Do you find it difficult to remember

what you read? Do you put off studying because it's boring and you're easily distracted? This book is for you. Dr. Barbara Oakley and Olav Schewe have both struggled in the past with their learning. But they have found techniques to help them master any material. Building on insights from neuroscience and cognitive psychology, they give you a crash course to improve your ability to learn, no matter what the subject is. Through their decades of writing, teaching, and research on learning, the authors have developed deep connections with experts from a vast array of disciplines. And it's all honed with feedback from thousands of students who have themselves gone through the trenches of learning. Successful learners gradually add tools and techniques to their mental toolbox, and they think critically about their learning to determine when and how to best use their mental tools. That allows these learners to make the best use of their brains, whether those brains seem "naturally" geared toward learning or not. This book will teach you how you can do the same.

Hacking Chinese - Olle Linge 2016-03-26

Learning Chinese can be frustrating and difficult, partly because it's very different from European languages. Following a teacher, textbook or language course is not enough. They show you the characters, words and grammar you need to become proficient in Chinese, but they don't teach you how to learn them! Regardless of what program you're in (if any), you need to take responsibility for your own learning. If you don't, you will miss many important things that aren't included in the course you're taking. If you study on your own, you need to be even more aware of what you need to do, what you're doing at the moment and the difference between them. Here are some of the questions I have asked and have since been asked many times by students: How do I learn characters efficiently? How do I get the most out of my course or teacher? Which are the best learning tools and resources? How can I become fluent in Mandarin? How can I improve my pronunciation? How do I learn successfully on my own? How can I motivate myself to study more? How can I fit learning Chinese into a busy schedule? The answers I've found to these questions and many others form the core of this book. It took eight years of learning, researching, teaching and writing to figure these things out. Not everybody has the time to do that! I can't go back in time and help myself learn in a better way, but I can help you! This book is meant for normal students and independent language learners alike. While it covers all major areas of learning, you won't learn Chinese just by reading this book. It's like when someone on TV teaches you how to cook: you won't get to eat the delicious dish just by watching the program; you have to do the cooking yourself. That's true for this book as well. When you apply what you learn, it will boost your learning, making every hour you

spend count for more, but you still have to do the learning yourself. This is what a few readers have said about the book: "The book had me nodding at a heap of things I'd learnt the hard way, wishing I knew them when I started, as well as highlighting areas that I'm currently missing in my study." - Geoff van der Meer, VP engineering "This publication is like a bible for anyone serious about Chinese proficiency. It's easy for anyone to read and written with scientific precision." - Zachary Danz, foreign teacher, children's theatre artist About me I started learning Chinese when I was 23 (that's more than eight years ago now) and have since studied in many different situations, including serious immersion programs abroad, high-intensity programs in Sweden, online courses, as well as on the side while working or studying other things. I have also successfully used my Chinese in a graduate program for teaching Chinese as a second language, taught entirely in Chinese mostly for native speakers (the Graduate Institute for Teaching Chinese as a Second Language at National Taiwan Normal University). All these parts have contributed to my website, Hacking Chinese, where I write regularly about how to learn Mandarin.

Make It Stick - Peter C. Brown 2014-04-14

[Fluent in 3 Months](#) - Benny Lewis 2014-03-11

Benny Lewis, who speaks over ten languages—all self-taught—runs the largest language-learning blog in the world, *Fluent In 3 Months*. Lewis is a full-time "language hacker," someone who devotes all of his time to finding better, faster, and more efficient ways to learn languages. *Fluent in 3 Months: How Anyone at Any Age Can Learn to Speak Any Language from Anywhere in the World* is a new blueprint for fast language learning. Lewis argues that you don't need a great memory or "the language gene" to learn a language quickly, and debunks a number of long-held beliefs, such as adults not being as good of language learners as children.

Teach Students How to Learn - Sandra Yancy McGuire 2015-10-14

Miriam, a freshman Calculus student at Louisiana State University, made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third—These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple, straightforward strategies to use, they can significantly increase their learning and performance. For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years, ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and

implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Saundra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.

Learning How to Learn - Barbara Oakley, PhD
2018-08-07

A surprisingly simple way for students to master any subject--based on one of the world's most popular online courses and the bestselling book *A Mind for Numbers* *A Mind for Numbers* and its wildly popular online companion course "Learning How to Learn" have empowered more than two million learners of all ages from around the world to master subjects that they once struggled with. Fans often wish they'd discovered these learning strategies earlier and ask how they can help their kids master these skills as well. Now in this new book for kids and teens, the authors reveal how to make the most of time spent studying. We all have the tools to learn what might not seem to come naturally to us at first--the secret is to understand how the

brain works so we can unlock its power. This book explains:

- Why sometimes letting your mind wander is an important part of the learning process
- How to avoid "rut think" in order to think outside the box
- Why having a poor memory can be a good thing
- The value of metaphors in developing understanding
- A simple, yet powerful, way to stop procrastinating

Filled with illustrations, application questions, and exercises, this book makes learning easy and fun.

How to Be a Successful Student - Donald Martin 1993-01-19

Test-Taking Strategies - Judi Kesselman-Turkel 2004-05-01

THE STUDY SMART SERIES, designed for students from junior high school through lifelong learning programs, teaches skills for research and note-taking, provides exercises to improve grammar, and reveals secrets for putting these skills together in great essays. Test taking is a skill apart from learning course material, a skill every student must acquire in order to survive. *Test-Taking Strategies* is the book for anyone who has ever dreaded an exam. Strategies for taking every kind of test are dealt with—objective tests (multiple choice, true/false, matching), essay tests, and oral exams. The authors also offer help for handling anxiety,

explaining relaxation and desensitization techniques that help students control nervousness and keep it from detracting from performance. There are tips for managing time during the test, knowing when to guess, and for pulling answers out of your memory even when the question drew a blank at first glance. Essay tests and oral exams are particularly gruesome for most students, and until now there has been very little advice for handling such tests. *Test-Taking Strategies* includes plenty of advice for developing ideas while under pressure.

[How We Learn](#) - Benedict Carey 2014-09-09

In the tradition of *The Power of Habit* and *Thinking, Fast and Slow* comes a practical, playful, and endlessly fascinating guide to what we really know about learning and memory today—and how we can apply it to our own lives. From an early age, it is drilled into our heads: Restlessness, distraction, and ignorance are the enemies of success. We're told that learning is all self-discipline, that we must confine ourselves to designated study areas, turn off the music, and maintain a strict ritual if we want to ace that test, memorize that presentation, or nail that piano recital. But what if almost everything we were told about learning is wrong? And what if there was a way to achieve more with less effort? In *How We Learn*, award-winning science reporter Benedict Carey sifts through decades of education research and landmark studies to uncover the truth about how our brains absorb and retain information. What he discovers is that, from the moment we are born, we are all learning quickly, efficiently, and automatically; but in our zeal to systematize the process we have ignored valuable, naturally enjoyable learning tools like forgetting, sleeping, and daydreaming. Is a dedicated desk in a quiet room really the best way to study? Can altering your routine improve your recall? Are there times when distraction is good? Is repetition necessary? Carey's search for answers to these questions yields a wealth of strategies that make learning more a part of our everyday lives—and less of a chore. By road testing many of the counterintuitive techniques described in this book, Carey shows how we can flex the neural muscles that make deep learning possible. Along the way he reveals why teachers should give final exams on the first day of class, why it's

wise to interleave subjects and concepts when learning any new skill, and when it's smarter to stay up late prepping for that presentation than to rise early for one last cram session. And if this requires some suspension of disbelief, that's because the research defies what we've been told, throughout our lives, about how best to learn. The brain is not like a muscle, at least not in any straightforward sense. It is something else altogether, sensitive to mood, to timing, to circadian rhythms, as well as to location and environment. It doesn't take orders well, to put it mildly. If the brain is a learning machine, then it is an eccentric one. In *How We Learn*, Benedict Carey shows us how to exploit its quirks to our advantage.

[10 Steps to Earning Awesome Grades \(While Studying Less\)](#) - Thomas Frank 2015-01-05

Becoming a more effective learner and boosting your productivity will help you earn better grades - but it'll also cut down on your study time. The Only Study Guide You'll Ever Need - Jade Bowler 2021-08-05

We've all been there: a new school year starts and there's 8 months till your exams - that's plenty of time, right? Then there's 6 months, 3 months, 1 month and oh, now there's 2 weeks left and you haven't started studying... What happens next is a panic-induced mayhem of highlighting everything in the textbook (without

even questioning if it's actually helpful). But I'm here to help you change this! In *The Only Study Guide You'll Ever Need*, I'll cover a range of different topics including: · How to get started and pick up that pen · Learning techniques that actually work (hello, science of memory!) · The dos and don'ts of timetabling · And combatting fear of failure, perfectionism, exam stress and so much more! As a fellow student now at university, I definitely don't have a PhD in Exam Etiquette but this is the book younger me needed. All I wanted was one place that had a variety of tried-and-tested methods with reassurance from someone who had recently been through the education system. *The Only Study Guide You'll Ever Need* is just that, and I have collected the best techniques and tools I wish I'd known earlier to help you get through your studies and smash your exams!
