How People Learn - National Research Council 2000-08-11

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Fifty Common Birds of the Upper Midwest - Nancy Overcott 2007-09-01

No bird is common, if we use "common" to mean ordinary. But birds that are seen more commonly than others can seem less noteworthy than species that are rarely glimpsed. In this gathering of essays and illustrations celebrating fifty of the most common birds of the Upper Midwest, illustrator Dana Gardner and writer Nancy Overcott encourage us to take a closer look at these familiar birds with renewed appreciation for their not-so-ordinary beauty and lifeways. Beginning with the garishly colored male and the more gently colored female wood duck, whose tree cavity nest serves as a launching pad for ducklings in the summer months, and ending on a bright yellow note with the American goldfinch, whose cheerful presence enlivens

the midwestern landscape all year long, Overcott combines field observations drawn from her twenty-plus years of living and birding in Minnesota's Big Woods with anecdotes and data from other ornithologists to portray each species' life cycle, its vocalizations and appearance, and its habitat, food, and foraging methods as well as migration patterns and distribution. Infused with a dedication to conserving natural resources, her succinct yet personable prose forms an ideal complement to Gardner's watercolors as this renowned illustrator of avian life worldwide revisits the birds of his childhood. Together art and text ensure that the wild turkey, great blue heron, sharp-shinned hawk, barred owl, pileated woodpecker, house wren, ovenbird, field sparrow, rose-breasted grosbeak, red-winged blackbird, and forty other species of the Upper Midwest are never seen as common again.
