Infinite Vision - Pavithra K. Mehta 2011

"The Aravind Eye Hospital, based in India, is the world's largest provider of high-quality eye care. It is also one of the world's most incredible and revolutionary organizations - delivering surgical outcomes equal to or exceeding those in the developed world at less than one percent of the cost, treating more than half of its patients free of charge, and taking no grants or donations.

Aravind's success is so perplexing it has been the subject of a popular Harvard Business School case study. This is the first book to explore Aravind's history and the distinctive philosophies, practices, and commitments that are the keys to its success. Mehta and Shenoy share incredible stories about how Aravind grew from humble beginnings--founded by a retired ophthalmologist with no money or prior entrepreneurial experience--to the world-class organization it is today. They explain the mysteries of a model that integrates innovation with empathy, service with business principles, and inner change with outer transformation. And they show how choices that seem foolish and unworkable can, when executed with compassion and integrity, yield powerful results - results that literally light the eyes of millions."-- Provided by publisher.

Monetary Unions and Hard Pegs - Volbert Alexander 2004-03-25

Financial services with global reach are becoming ever more important in the conduct and organization of the trade and investment of nations, and currencies that lack international standing lose out in this business. The result of financial development has been destabilizing currency and portfolio substitution — in favour of international currencies and against local ones. This book analyses formal approaches to overcoming monetary divisions within countries and within integrating regions, focusing on the consequences of monetary union for trade among union members and their financial

development and stability. The authors discuss hard pegs such as those attempted by the currency board of Argentina, outright dollarization, such as in Ecuador, and multilateral monetary union, as in Europe, the least reversible form of monetary union and the most powerful elixir of financial integration and trade. The political classes and central banks in most countries have been reluctant to admit the market- and technology-driven forces of currency consolidation, much less yield to them. International financial institutions too are still in the habit of proffering advice about national monetary and exchange-rate policies on the assumption that getting rid of both is not even an option. Emerging-market countries, in particular, have to choose between retaining what independent monetary means they still have — and can safely use in the presence of widespread liability dollarization and currency mismatches — and formally replacing the domestic with an international currency to

reduce exposure to debilitating financial crises. In concrete investigations of this choice, this volume shows that monetary union deserves a much more sympathetic hearing.

Managerial Economics is a science dealing with effective use of scarce resources. It guides the managers in taking decisions relating to the firm's customers, competitors, suppliers as well as relating to the internal functioning of a firm. It makes use of statistical and analytical tools to assess economic theories in solving

practical business problems. Study of Managerial Economics helps in enhancement of analytical skills, assists in rational configuration as well as solution of problems.
