Experiencing the Thirty Years War - Hans Medick 2013-03-01

One of the most momentous and destructive wars in European history, the Thirty Years War has long been studied for its diplomatic, political, and military consequences. Yet the actual participants in this religiously motivated, seemingly endless conflict have largely been ignored. Hans Medick and Benjamin Marschke reveal the Thirty Years War from the perspective of those who lived it. Their introduction provides important insights into the roiling religious and political landscape from which the war emerged, as well as a thoughtful examination of the war's stages and enduring significance. An unprecedented collection of personal accounts, many of them translated for the first time into English, combine with visual sources to convey directly to students the experience of early modern warfare. Incisive document headnotes, maps and illustrations, a chronology, questions to consider, and a bibliography enrich students' understanding of this fateful war.

The Dream of Enlightenment: The Rise of Modern Philosophy - Anthony Gottlieb 2016-08-30

Anthony Gottlieb's landmark *The Dream of Reason* and its sequel challenge Bertrand Russell's classic as the definitive history of Western philosophy. Western philosophy is now two and a half millennia old, but much of it came in just two staccato bursts, each lasting only about 150 years. In his landmark survey of Western philosophy from the Greeks to the

Renaissance, *The Dream of Reason*, Anthony Gottlieb documented the first burst, which came in the Athens of Socrates, Plato, and Aristotle. Now, in his sequel, *The Dream of Enlightenment*, Gottlieb expertly navigates a second great explosion of thought, taking us to northern Europe in the wake of its wars of religion and the rise of Galilean science. In a relatively short period—from the early 1640s to the eve of the French Revolution—Descartes, Hobbes, Spinoza, Locke, Leibniz, and Hume all made their mark. *The Dream of Enlightenment* tells their story and that of the birth of modern philosophy. As Gottlieb explains, all these men were amateurs: none had much to do with any university. They tried to fathom the implications of the new science and of religious upheaval, which led them to question traditional teachings and attitudes. What does the advance of science entail for our understanding of ourselves and for our ideas of God? How should a government deal with religious diversity—and what, actually, is government for? Such questions remain our questions, which is why Descartes, Hobbes, and the others are still pondered today. Yet it is because we still want to hear them that we can easily get these philosophers wrong. It is tempting to think they speak our language and live in our world; but to understand them properly, we must step back into their shoes. Gottlieb puts readers in the minds of these frequently misinterpreted figures, elucidating the history of their times and the development of scientific ideas while engagingly explaining their arguments and assessing their legacy in lively prose. With chapters focusing on Descartes,

Hobbes, Spinoza, Locke, Pierre Bayle, Leibniz, Hume, Rousseau, and Voltaire—and many walk-on parts—The Dream of Enlightenment creates a sweeping account of what the Enlightenment amounted to, and why we are still in its debt.

The Enlightenment - Dorinda Outram
2005-09-08

Debate over the meaning of 'Enlightenment' began in the eighteenth century and has continued unabated until our own times. This period saw the opening of arguments on the nature of man, truth, on the place of God, and the international circulation of ideas, people and gold. Did the Enlightenment mean the same for men and women, for rich and poor, for Europeans and non-Europeans? In the second edition of her book, Dorinda Outram addresses these, and other questions about the Enlightenment. She studies it as a global phenomenon, setting the period against broader social changes. This new edition offers a fresh introduction, a new chapter on slavery, and new material on the Enlightenment as a global phenomenon. The bibliography and short biographies have been extended. This accessible synthesis of scholarship will prove invaluable reading to students of eighteenth-century history, philosophy, and the history of ideas.

Uneasy Careers and Intimate Lives - Pnina G. Abir-Am 1987

These pioneering studies of women in science pay special attention to the mutual impact of family life and scientific career. The contributors address five key themes: historical changes in such concepts as scientific career, profession, patronage, and family; differences in "gender image" associated with various branches of science; consequences of national differences and emigration; opportunities for scientific work opened or closed by marriage; and levels of women's awareness about the role of gender in science.

The French Revolution: A Very Short Introduction - William Doyle 2001-08-23

Beginning with a discussion of familiar images of the French Revolution, this work looks at how the ancien régime became ancien as well as examining cases in which achievement failed to match ambition.

The Romantic Revolution - Tim Blanning
2011-08-02

"A splendidly pithy and provocative introduction to the culture of Romanticism."—The Sunday Times "[Tim Blanning is] in a particularly good position to speak of the arrival of Romanticism on the European scene, and he does so with a verve, a breadth, and an authority that exceed every expectation."—National Review From the preeminent historian of Europe in the eighteenth and nineteenth centuries comes a superb, concise account of a cultural upheaval that still shapes sensibilities today. A rebellion against the rationality of the Enlightenment, Romanticism was a profound shift in expression that altered the arts and ushered in modernity, even as it championed a return to the intuitive and the primitive. Tim Blanning describes its beginnings in Rousseau's novel *La Nouvelle Héloïse*, which placed the artistic creator at the center of aesthetic activity, and reveals how Goethe, Goya, Berlioz, and others began experimenting with themes of artistic madness, the role of sex as a psychological force, and the use of dreamlike imagery. Whether unearthing the origins of "sex appeal" or the celebration of accessible storytelling, *The Romantic Revolution* is a bold and brilliant introduction to an essential time whose influence would far outlast its age. "Anyone with an interest in cultural history will revel in the book's range and insights. Specialists will savor the anecdotes, casual readers will enjoy the introduction to rich and exciting material. Brilliant artistic output during a time of transformative upheaval never gets old, and this book shows us why."—The Washington Times "It's a pleasure to read a relatively concise piece of scholarship of so high a caliber, especially expressed as well as in this fine book."—Library Journal

The Case for The Enlightenment - John Robertson 2005-10-27

The Case for the Enlightenment is a comparative study of the emergence of Enlightenment in Scotland and in Naples. Challenging the tendency to fragment the Enlightenment in eighteenth-century Europe into multiple Enlightenments, the distinguished intellectual historian John Robertson demonstrates the extent to which thinkers in two societies at the opposite ends of Europe shared common intellectual preoccupations. Before 1700, Scotland and Naples faced a bleak future as backward, provincial kingdoms in a Europe of aggressive commercial states. Yet by 1760, Scottish and Neapolitan thinkers were in the van of those advocating the cause of Enlightenment by means of political economy. By studying the social and institutional contexts of intellectual life in the two countries, and the currents of thought promoted within them, The Case for the Enlightenment explains this transformation. John Robertson pays particular attention to the greatest thinkers in each country, David Hume and Giambattista Vico.

The Enlightenment - Anthony Pagden 2013-05-23

This book tells nothing less than the story of how the modern, Western view of the world was born. Cultural and intellectual historian Anthony Pagden explains how, and why, the ideal of a universal, global, and cosmopolitan society became such a central part of the Western imagination in the ferment of the Enlightenment - and how these ideas have done battle with an inward-looking, tradition-oriented view of the world ever since. Cosmopolitanism is an ancient creed; but in its modern form it was a creature of the Enlightenment attempt to create a new 'science of man', based upon a vision of humanity made up of autonomous individuals, free from all the constraints imposed by custom,

prejudice, and religion. As Pagden shows, this 'new science' was based not simply on 'cold, calculating reason', as its critics claimed, but on the argument that all humans are linked by what in the Enlightenment were called 'sympathetic' attachments. The conclusion was that despite the many tribes and nations into which humanity was divided there was only one 'human nature', and that the final destiny of the species could only be the creation of one universal, cosmopolitan society. This new 'human science' provided the philosophical grounding of the modern world. It has been the inspiration behind the League of Nations, the United Nations and the European Union. Without it, international law, global justice, and human rights legislation would be unthinkable. As Anthony Pagden argues passionately and persuasively in this book, it is a legacy well worth preserving - and one that might yet come to inherit the earth.

Singular Case - Ashley Eva Millar 2017-03-22
China held a unique place in European thought during the eighteenth century. Considered a relatively unknown but advanced agrarian and commercial civilization, the Chinese Empire represented the apex of an economic system that was only beginning to be supplanted. Europeans did not assume their superiority and were drawn to study the nature and organization of China's economy. Analyzing the writings of early modern European travellers, missionaries, merchants, geographers, and philosophers, including Charles de Secondat, Denis Diderot, David Hume, François Quesnay, Abbé Raynal, Jean-Jacques Rousseau, Adam Smith, and Voltaire, A Singular Case evaluates the circulation of information about the Chinese political economy that fed European imaginations. Ashley Millar examines perceptions of China's science, technology, and moral and behavioural foundations, foreign trade policies, and the form and function of China's government in order to question the extent to which consensus emerged on China's successes and failures and to assess how knowledge of the Chinese system influenced the Enlightenment. Shedding light on contemporary debates on the rise of the west and the Great Divergence from a historical vantage point, A Singular Case offers striking observations on Western views of early modern China.

Nature in Ireland - John Wilson Foster 1998
How has Irish nature been studied? How has it been expressed in literature and popular culture? How has it influenced, and been influenced by, political, economic, and social change? These long-neglected questions are pursued in *Nature in Ireland*, a pioneering collection of original essays by leading naturalists, science writers, and cultural historians who bring us from the geological prehistory of Ireland to the environmental threats of the late twentieth century.

The Cambridge History of Eighteenth-Century Political Thought - Lecturer in History and Fellow Mark Goldie 2006-08-31
Publisher description

The Portable Enlightenment Reader - Various 1995-12-01
The Age of Enlightenment of the 18th century, also called the Age of Reason, was so named for an intellectual movement that shook the foundations of Western civilization. In championing radical ideas such as individual liberty and an empirical appraisal of the universe through rational inquiry and natural experience, Enlightenment philosophers in Europe and America planted the seeds for modern liberalism, cultural humanism, science and technology, and laissez-faire Capitalism This volume brings together works from this era, with more than 100 selections from a range of sources. It includes examples by Kant, Diderot, Voltaire, Newton, Rousseau, Locke, Franklin, Jefferson, Madison, and Paine that demonstrate the pervasive impact of Enlightenment views on philosophy and epistemology as well as on political, social, and economic institutions.

The Imagined Empire - Mi Gyung Kim
2017-03-31

The hot-air balloon, invented by the Montgolfier brothers in 1783, launched for the second time just days before the Treaty of Paris would end the American Revolutionary War. The ascent in Paris—a technological marvel witnessed by a diverse crowd that included Benjamin Franklin—highlighted celebrations of French military victory against Britain and ignited a balloon mania that swept across Europe at the end of the Enlightenment. This popular frenzy for balloon experiments, which attracted hundreds of thousands of spectators,

fundamentally altered the once elite audience for science by bringing aristocrats and commoners together. *The Imagined Empire* explores how this material artifact, the flying machine, not only expanded the public for science and spectacle but also inspired utopian dreams of a republican monarchy that would obliterate social boundaries. The balloon, Mi Gyung Kim argues, was a people-machine, a cultural performance that unified and mobilized the people of France, who imagined an aerial empire that would bring glory to the French nation. This critical history of ballooning considers how a relatively simple mechanical gadget became an explosive cultural and political phenomenon on the eve of the French Revolution.

Panorama of the Enlightenment - Dorinda Outram 2006

Presents a comprehensive overview of the Enlightenment, discussing the intellectuals of the period who promoted the scientific method of investigation and explored such topics as nature, the universe, the human mind, the rights of women, and medicine.

The Enlightenment - Ritchie Robertson
2021-02-23

A magisterial history that recasts the Enlightenment as a period not solely consumed with rationale and reason, but rather as a pursuit of practical means to achieve greater human happiness. One of the formative periods of European and world history, the Enlightenment is the fountainhead of modern secular Western values: religious tolerance, freedom of thought, speech and the press, of rationality and evidence-based argument. Yet why, over three hundred years after it began, is the Enlightenment so profoundly misunderstood as controversial, the expression of soulless calculation? The answer may be that, to an extraordinary extent, we have accepted the account of the Enlightenment given by its conservative enemies: that enlightenment necessarily implied hostility to religion or support for an unfettered free market, or that this was “the best of all possible worlds”. Ritchie Robertson goes back into the “long eighteenth century,” from approximately 1680 to 1790, to reveal what this much-debated period was really about. Robertson returns to the era’s original

texts to show that above all, the Enlightenment was really about increasing human happiness – in this world rather than the next – by promoting scientific inquiry and reasoned argument. In so doing Robertson chronicles the campaigns mounted by some Enlightened figures against evils like capital punishment, judicial torture, serfdom and witchcraft trials, featuring the experiences of major figures like Voltaire and Diderot alongside ordinary people who lived through this extraordinary moment. In answering the question 'What is Enlightenment?' in 1784, Kant famously urged men and women above all to “have the courage to use your own intellect”. Robertson shows how the thinkers of the Enlightenment did just that, seeking a well-rounded understanding of humanity in which reason was balanced with emotion and sensibility. Drawing on philosophy, theology, historiography and literature across the major western European languages, *The Enlightenment* is a master-class in big picture history about the foundational epoch of modern times.

Science, Enlightenment and Revolution -

Dorinda Outram 2021-09-30

Science, Enlightenment and Revolution brings together thirteen papers by renowned historian Dorinda Outram. Published between 1976 and 2019 and scattered in a variety of journals and collected volumes, these articles are published together here for the first time. During her distinguished career, Outram has made significant contributions to the history of science, to the history and historiography of the Enlightenment, to gender history, to the history of geographical exploration, and to the historical uses of language. This volume also includes other writings by Outram, comprising an

unpublished introduction in the form of an intellectual autobiography. Placing this together with her collected academic papers offers readers an overview of her development as an historian and a writer. This book is important reading for scholars and students of early modern Europe, as well as those interested in the Enlightenment, the French Revolution and gender studies.

The Information Revolution in Early Modern Europe - Paul M. Dover 2021-10-14

This provocative new history of early modern Europe argues that changes in the generation, preservation and circulation of information, chiefly on newly available and affordable paper, constituted an 'information revolution'. In commerce, finance, statecraft, scholarly life, science, and communication, early modern Europeans were compelled to place a new premium on information management. These developments had a profound and transformative impact on European life. The huge expansion in paper records and the accompanying efforts to store, share, organize and taxonomize them are intertwined with many of the essential developments in the early modern period, including the rise of the state, the Print Revolution, the Scientific Revolution, and the Republic of Letters. Engaging with historical questions across many fields of human activity, Paul M. Dover interprets the historical significance of this 'information revolution' for the present day, and suggests thought-provoking parallels with the informational challenges of the digital age.

Europe - James Van Horn Melton 2001-09-06
James Melton examines the rise of the public in 18th-century Europe. A work of comparative synthesis focusing on England, France and the German-speaking territories, this is a reassessment of what Habermas termed the bourgeois public sphere.

The Body and the French Revolution - Dorinda Outram 2022-02-07

This book, first published in 1989, is an analysis of what changed in 1789 with the French Revolution and what contemporary life owes to the event. It was not simply a series of events with worldwide repercussions, but also represented the foundation of the middle-class domination of social, cultural and political space, which survives today and is the site of major crises of public culture. One such site is the body. In spite of its prominence in consumer culture as an object of adornment and beautification, the human body retains none of its historic dignity and authority. The argument of this book is that the French Revolution played a crucial part in this diminution of the body. It traces revolutionary models of behaviour around the body and public life, and explains how such myths as the division between public and private, male and female worlds, and such masculine values as 'objectivity' were an integral part of the new public world created by the revolutionary middle class.

[Literary History and Popular Enlightenment in Latvian Culture](#) - Pauls Daija 2017-05-11

The Enlightenment of peasants, an 18th-century phenomenon that originated from an interest in common people and ideas of about the emancipation of the lower classes, had a crucial impact on creating Latvian secular literary culture. When Baltic German intellectuals, inspired by the Popular Enlightenment in German-speaking countries, undertook the task to educate Latvian peasants through books, they also laid the foundation for the future emancipation of Latvian culture. By exploring the nature of book production and changing images of peasants in Livonia and Courland in the second part of the 18th and the beginning of the 19th century, this book offers insights into the complex historical relationship between Latvians and Baltic Germans and the regional specifics of the Baltic Enlightenment.

[The Rise And Fall of British Naval Mastery](#) - Paul Kennedy 2017-01-26

Paul Kennedy's classic naval history, now updated with a new introduction by the author. This acclaimed book traces Britain's rise and fall as a sea power from the Tudors to the present day. Challenging the traditional view that the British are natural 'sons of the waves', he suggests instead that the country's fortunes as a significant maritime force have always been bound up with its economic growth. In doing so, he contributes significantly to the centuries-long debate between 'continental' and 'maritime' schools of strategy over Britain's policy in times of war. Setting British naval history within a framework of national, international, economic, political and strategic considerations, he offers a fresh approach to one of the central questions in British history. A new introduction extends his analysis into the twenty-first century and reflects on current American and Chinese ambitions for naval mastery. 'Excellent and stimulating' Correlli Barnett 'The first scholar to have set the sweep of British Naval history against the background of economic history' Michael Howard, Sunday Times 'By far the best study that has ever been done on the subject ... a sparkling and apt quotation on practically every page' Daniel A. Baugh, International History Review 'The best single-volume study of Britain and her naval past now available to us' Jon Sumida, Journal of Modern History

Fools and Jesters at the English Court - John Southworth 2011-11-30

Fools have been a feature of virtually every recorded culture in the history of civilization, making significant contributions to the development of early theatre and literary drama. This book offers a reign by reign chronicle of English court fools.

The Sciences in Enlightened Europe - William Clark 1999-07

Radically reorienting our understanding of the Enlightenment, this book explores the complex relations between "enlightened" values and the

making of scientific knowledge. Here monsters and automata, barometers and botanical gardens, polite academics and boisterous clubs, plans for violent wars and for universal peace, are all relocated in the landscape of enlightened Europe. The contributors show how changing forms of discipline, machinery, and instrumentation affected the emergence of new kinds of knowledge; consider how institutions of public taste and conversation helped provide a common frame for the study of human and nonhuman natures; and explore the regional operations of scientific culture at the geographical fringes of Europe. Covering a wide range of scientific disciplines, both in the principal European countries and in areas peripheral to Europe, the book also includes ample illustrations and an extensive bibliography. Implicated in the rise of both fascism and liberal secularism, the moral and political values that shaped the Enlightenment remain controversial today. Through careful scrutiny of how these values influenced and were influenced by the concrete practices of its sciences, this book gives us an entirely new sense of the Enlightenment. -- from back cover.

[Sex, France, and Arab Men, 1962-1979](#) - Todd Shepard 2021-07-12

The aftermath of Algeria's revolutionary war for independence coincided with the sexual revolution in France, and in this book Todd Shepard argues that these two movements are inextricably linked. *Sex, France, and Arab Men* is a history of how and why—from the upheavals of French Algeria in 1962 through the 1970s—highly sexualized claims about Arabs were omnipresent in important public French discussions, both those that dealt with sex and those that spoke of Arabs. Shepard explores how the so-called sexual revolution took shape in a France profoundly influenced by the ongoing effects of the Algerian revolution. Shepard's analysis of both events alongside one another provides a frame that renders visible the ways that the fight for sexual liberation, usually explained as an American and European invention, developed out of the worldwide anticolonial movement of the mid-twentieth century.

Four Fools in the Age of Reason - Dorinda Outram 2019-04-12

Unveiling the nearly lost world of the court fools of eighteenth-century Germany, Dorinda Outram shows that laughter was an essential instrument of power. Whether jovial or cruel, mirth altered social and political relations. Outram takes us first to the court of Frederick William I of Prussia, who emerges not only as an administrative reformer and notorious militarist but also as a "master of fools," a ruler who used fools to prop up his uncertain power. The autobiography of the itinerant fool Peter Prosch affords a rare insider's view of the small courts in Catholic south Germany, Austria, and Bavaria. Full of sharp observations of prelates and princes, the autobiography also records episodes of the extraordinary cruelty for which the German princely courts were notorious. Joseph Fröhlich, court fool in Dresden, presents more appealing facets of foolery. A sharp salesman and hero of the Meissen factories, he was deeply attached to the folk life of fooling. The book ends by tying the growth of Enlightenment skepticism to the demise of court foolery around 1800. Outram's book is invaluable for giving us such a vivid depiction of the court fool and especially for revealing how this figure can shed new light on the wielding of power in Enlightenment Europe.

The Enlightenment - John Robertson 2015

This introduction explores the history of the 18th-century Enlightenment movement.

Considering its intellectual commitments, Robertson then turns to their impact on society, and the ways in which Enlightenment thinkers sought to further the goal of human betterment, by promoting economic improvement and civil and political justice.

The Military Enlightenment - Christy L. Pichichero 2017-11-15

The Military Enlightenment brings to light a radically new narrative both on the Enlightenment and the French armed forces from Louis XIV to Napoleon. Christy Pichichero makes a striking discovery: the Geneva Conventions, post-traumatic stress disorder, the

military "band of brothers," and soldierly heroism all found their antecedents in the eighteenth-century French armed forces. From Louis XIV through Napoleon, from Canada to the Caribbean and India, the military was one of the few institutions of the Old Regime to transform progressive theories into practice, actually operationalizing the Enlightenment. Pichichero isolates and examines a crisis in consciousness that has characterized attitudes toward war from the eighteenth century until today. The demands of global political power warrant an ever more formidable and efficient fiscal-military state, and at the same time, awareness of the "human factor" generates the desire to minimize the devastation of war on cities and landscapes, and civilians, as well as the mind, body, and heart of the soldier. Readers of *The Military Enlightenment* will be startled to learn of the many ways in which French military officers, administrators, and medical personnel advanced ideas of human and political rights, military psychology, and social justice.

Enlightenment - David L. Phillips 2007-08-30

The Statue of Liberty likeness illustrated on the cover of *Enlightenment* is a very symbolic image not only for Americans but for many other people of the world who harbor dreams for life, liberty, and the pursuit of happiness. However, there are many individual and collective responsibilities that come with any such vision. Most Americans know orderly governmental systems are required to maintain a civilized culture, but in many societies one often wonders what type is most appropriate. While the western democracy structure has had significant success to date, it is far from perfect even within the United States. The author has spent the past forty years working within national and international governmental systems from the grass roots local level to regional, state, and federal jurisdictions. In this book, he notes the timeless lessons learned from experience and history as well as new and innovative ways to utilize the modern age of information technology. The net result is an effort to create new public excellence from tired work cultures. In the future, it is clear that economic globalization with its associated social and cultural impacts will bring about a new competition between many societies and their

related governmental structures. This simple reality means that less efficient future governments will jeopardize the very viability of their own cultures. Therefore, if Americans wish to effectively compete on the coming international level of tomorrow, they must get their collective governmental house in order today. Enlightenment illustrates how a healthy competitive environment can be developed and sustained without jeopardizing any of the freedoms and opportunities we have come to expect.

Sentimental Savants - Meghan K. Roberts 2016-10-26

An illuminating study of the marriages and family lives of Diderot, Lavoisier, and other geniuses of the Age of Reason. We may imagine the lone scientific or philosophical genius generating insights in isolation—but in reality, the families of scientists and philosophers during the Enlightenment played a substantial role, not only making space for inquiry within the home but also assisting in observing, translating, calculating, and illustrating. *Sentimental Savants* is the first book to explore the place of the family among the savants of the French Enlightenment, a group that openly embraced their families and domestic lives, even going so far as to test out their ideas, from education to inoculation, on their own children. Meghan K. Roberts delves into the lives and work of such major figures as Denis Diderot, Emilie Du Chatelet, the Marquis de Condorcet, Antoine Lavoisier, and Jerome Lalande to paint a striking portrait of how sentiment and reason interacted in the eighteenth century to produce not only new kinds of knowledge but new kinds of families as well. "[A] well-crafted study...an important contribution to what Robert Darnton has called 'the social history of ideas.'"—Choice
Interpreting Early Modern Europe - C. Scott Dixon 2019-10-01

Interpreting Early Modern Europe is a comprehensive collection of essays on the historiography of the early modern period (circa 1450-1800). Concerned with the principles, priorities, theories, and narratives behind the writing of early modern history, the book places particular emphasis on developments in recent scholarship. Each chapter, written by a prominent historian caught up in the debates, is

devoted to the varieties of interpretation relating to a specific theme or field considered integral to understanding the age, providing readers with a 'behind-the-scenes' look at how historians have worked, and still work, within these fields. At one level the emphasis is historiographical, with the essays engaged in a direct dialogue with the influential theories, methods, assumptions, and conclusions in each of the fields. At another level the contributions emphasise the historical dimensions of interpretation, providing readers with surveys of the component parts that make up the modern narratives. Supported by extensive bibliographies, primary materials, and appendices with extracts from key secondary debates, *Interpreting Early Modern Europe*

provides a systematic exploration of how historians have shaped the study of the early modern past. It is essential reading for students of early modern history.

Geography and Enlightenment - David N. Livingstone 1999-12-15

Exploring both the Enlightenment as a geographical phenomenon and the place of geography in the Enlightenment, 14 papers from a July 1996 conference in Edinburgh survey the many ways in which the world of the long 18th century was shaped through map, text, exploration, and argument and within and across spatial and intellectual borders.
