Pura Besakih - David J. Stuart-Fox 2002

Pura Besakih is the paramount Hindu temple on Bali. Located high on the slopes of the volcano Mt Agung, it has developed over more than a thousand years into a great complex of 22 separate temples, the largest and central being Pura Penataran Agung. The annual cycle of more than seventy rituals, which symbolically link the temples into a whole, culminates in the centenary ceremony called Ekadasa Rudra (last held in 1979). The temple complex, state-supported at least since the fifteenth century, has undergone a series of architectural and ritual changes. This study combines an analysis of textual and historical sources with the fieldwork methods of anthropology in creating a unified interpretation of this great temple.

The Philosophical Society of Washington was founded on March 13, 1871. It was preceded by gatherings at the home of Joseph Henry, the great scientist whose discoveries laid foundations for advances in magnetism and electromagnetism. Since 1887 it has met at Cosmos Club, in whose founding Philosophical members played a large part. In 1878, when Cosmos was founded, it was feared that Philosophical would start an alternative club, so all present members of Philosophical Society were invited to join as founding members of Cosmos. This volume demonstrates the extraordinary history of Society.

Productivity in Higher Education - Caroline M. Hoxby 2019-11-22

How do the benefits of higher education compare with its costs, and how does this comparison vary across individuals and institutions? These questions are fundamental to quantifying the productivity of the education sector. The studies in Productivity in Higher Education use rich and novel administrative data, modern econometric methods, and careful institutional analysis to explore productivity issues. The authors examine the returns to undergraduate education, differences in costs by major, the productivity of for-profit schools, the productivity of various types of faculty and of outcomes, the effects of online education on the higher education market, and the ways in which the productivity of different institutions responds to market forces. The analyses recognize five key challenges to assessing productivity in higher education: the potential for multiple student outcomes in terms of skills, earnings, invention, and employment; the fact that colleges and universities are "multiproduct" firms that conduct varied activities across many domains; the fact that students select which school to attend based in part on their aptitude; the difficulty of attributing outcomes to individual institutions when students attend more than one; and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution. The findings and the approaches illustrated can facilitate decision-making processes in higher education.

Object-oriented Systems Development - Carol Britton 2000

This is an introductory text, a successor volume to the authors' previous

book Software System Development. A Gentle Introduction. It follows the software development process, from requirements capture to implementation, using an object-oriented approach. The book takes a practical viewpoint on developing software using object-oriented techniques. It provides the reader with a basic understanding of object-oriented concepts without getting lost in technical detail. It outlines standard object-oriented modelling techniques and illustrates them with a variety of examples and exercises, using Java as the language of implementation. A number of case studies are introduced and developed and the mapping from the design models to the implementation code is carefully traced. Software development is a skill that has to be learned by practice. Through their teaching, the authors have found that what students need is clear, practical guidelines, supported by a large number of graded examples and exercises. This was the approach taken in the authors' previous book, which has proved to be popular and effective. Many current books on this topic are very theoretical and lack the practical dimension that is so important in the learning process. This book is designed as a first text for introductory undergraduate and conversion MSc O-O courses.

Procurement of Works - 2000

These Standard Prequalification Documents serve as a guide for those wanting to prequalify to bid on large contracts for projects financed by the World Bank. Qualifying as a bidder is separate from the bid evaluation process. Before invitations to bid on large or especially complex works projects are issued, a process of prequalification is required to select competent bidders. This document helps bidders through the prequalification process. To simplify presentation by applicants for prequalification, standard forms have been prepared for the submission of relevant information. Guidance notes and examples are provided for the implementing agency making the evaluation. Annexes give information about prequalification that are likely to be of interest to potential bidders on World Bank projects. NOTE: This replaces Standard Prequalification Document: Procurement of Works (September 1999), Stock no. 14601 (ISBN 0-8213-4601-6).

Fuzzy Expert Systems - Abraham Kandel 1991-11-12

Until recently, fuzzy logic was the intellectual plaything of a handful of researchers. Now it is being used to enhance the power of intelligent systems, as well as improve the performance and reduce the cost of intelligent and "smart" products appearing in the commercial market. Fuzzy Expert Systems focuses primarily on the theory of fuzzy expert systems and their applications in science and engineering. In doing so, it provides the first comprehensive study of "soft" expert systems and applications for those systems. Topics covered include general purpose fuzzy expert systems, processing imperfect information using structured frameworks, the fuzzy linguistic inference network generator, fuzzy associative memories, the role of approximate reasoning in medical expert systems, MILORD (a fuzzy expert systems shell), and COMAX (an autonomous fuzzy expert system for tactical communications networks. Fuzzy Expert Systems provides an invaluable reference resource for researchers and students in artificial intelligence (AI) and approximate reasoning (AR), as well as for other researchers looking for methods to apply similar tools in their own designs of intelligent systems.

The New Public Service - Janet V Denhardt 2016-09-16

This widely praised work provides a framework for the many voices calling for the reaffirmation of democratic values, citizenship, and service in the public interest. The expanded edition includes an all-new chapter that addresses the practical issues of applying these ideals in actual, real-life situations. "The New Public Service, Expanded Edition" is organized around a set of seven core principles: serve citizens, not customers; seek the public interest; value citizenship and public service above entrepreneurship; think strategically, act democratically;

recognize that accountability isn't simple; serve, rather than steer; and value people, not just productivity. The book asks us to think carefully and critically about what public service is, why it is important, and what values ought to guide what we do and how we do it. It celebrates what is distinctive, important and meaningful about public service and considers how we might better live up to those ideals and values. All students and serious practitioners in public administration and public policy should read this book. While debates about public policy issues will surely continue, this compact, clearly written volume provides an important framework for public service based on and fully integrated with citizen discourse and the public interest.

Interconnecting Smart Objects with IP - Jean-Philippe Vasseur 2010-07-06

Interconnecting Smart Objects with IP: The Next Internet explains why the Internet Protocol (IP) has become the protocol of choice for smart object networks. IP has successfully demonstrated the ability to interconnect billions of digital systems on the global Internet and in private IP networks. Once smart objects can be easily interconnected, a whole new class of smart object systems can begin to evolve. The book discusses how IP-based smart object networks are being designed and

deployed. The book is organized into three parts. Part 1 demonstrates why the IP architecture is well suited to smart object networks, in contrast to non-IP based sensor network or other proprietary systems that interconnect to IP networks (e.g. the public Internet of private IP networks) via hard-to-manage and expensive multi-protocol translation gateways that scale poorly. Part 2 examines protocols and algorithms, including smart objects and the low power link layers technologies used in these networks. Part 3 describes the following smart object network

applications: smart grid, industrial automation, smart cities and urban networks, home automation, building automation, structural health monitoring, and container tracking. Shows in detail how connecting smart objects impacts our lives with practical implementation examples and case studies Provides an in depth understanding of the technological and architectural aspects underlying smart objects technology Offers an in-depth examination of relevant IP protocols to build large scale smart object networks in support of a myriad of new services
