Burkett 2006-04-20 In this book, John P. Burkett presents microeconomics as an evolving science, interacting with mathematics, psychology, and other disciplines and offering solutions to a growing range of practical problems. The book shows how early contributors such as Xenophon, Ibn Khaldun, and David Hume posed the normative and positive questions central to microeconomics. It expounds constrained optimization techniques, as developed by economists and mathematicians from Daniel Bernoulli to Leonid Kantorovich, emphasizing their value in deriving norms of rational behavior and testable hypotheses about typical

behavior. Applying these techniques, the book introduces partial equilibrium analysis of particular markets and general equilibrium analysis of market economies. The book both explains how laboratory and field experiments are used in testing economic hypotheses and provides materials for classroom experiments. It gives extensive and innovative coverage of recent findings in cognitive psychology and behavioral economics, which not only document behavior inconsistent with some traditional theories, but also advance positive theories with superior predictive power.

Modern Labour Economics - Peter Sloane 2013

Labour economics as a discipline has changed dramatically in recent years. Gone are the days of a "job for life". These days, firms and employees are part of a less regulated, more fluid, and more international labour market. Knowledge, training, human resource development and human capital are all major

factors on the contemporary scene. This new textbook is the first properly international textbook to reflect these swingeing changes. Its key areas of concentration include: the increasing importance of human capital including education and occupational choice the major subdivision of personnel economics including economic inactivity and absenteeism comparative cross country studies and the impact of globalization and migration on national labour markets equal opportunities and issues of discrimination on the basis of race, gender and disability conflict at work, including both strikes and, uniquely, individual disputes. Other issues explored include the supply and demand of labour, wages, the current role of trade unions, bargaining and conflict, and working time. The book is written in a clear, accessible way with some mathematical exposition, reflecting the text's grounding in current microeconomic theory. The book also contains case studies designed to illuminate

theoretical concepts and exercises and discussion questions to test the students understanding of the various concepts outlined in the text.

Microeconomics: Case Studies and Applications - Jeff Borland 2020-06-22

Microeconomics: Case Studies and Applications contains case studies that explore core microeconomics concepts by focusing on current events in economics and providing a theory

refresher for each section and questions. Designed to be a companion text to larger microeconomics texts, this resource offers a useful, time-saving alternative to sourcing online articles and journals. As a first-year text it teaches best-practice use of case studies and acts as a stepping stone for students who will source and use articles as they progress through their course. Each case study presents a different application of a core concept or theory. As well as the main text, which presents the application of the core concept, each case study contains a range of extra material. A 'Theory refresher' section provides a quick way for students to revise a key concept or theory that is important for understanding the application in that case study.

Theory of Profit with Islamic Directions - Zubair Hasan 2016-07-08

THEORY OF PROFIT WITH ISLAMIC DIRECTIONS deals with a controversial and neglected, but nonetheless important subject. Readers will find the narration interesting and innovative, for it does not discuss profit theories of various writers separately in chronological order; instead, it identifies issues in the area and analyses the views of various writers on each to propose restructuring of the theory as per Islamic directions. The issues raised include the definition and seat of profit, the cause of its emergence and sources, the motivational aspects and their impact on allocation of resources and incomes distribution, the nature of profit and the regulatory policy role. The work concludes that the source of prevalent confusion on the subject lies in defining profit as a costs/revenues differential of firms and the insistence that it is exclusively attributable to the entrepreneurs who tend to be vanishing in

the modern corporate era. For a reformulation of the theory to get rid of inconsistencies, the work suggests that profit should be viewed only as a cost/revenue differential delinked from reward; the firm - not the entrepreneur - should be the focal point for its study, the surplus beyond normal profit must be shared between capital and labour, subject to a minimum wage constraint, to promote social harmony and distributive justice. This book will appeal to the general reader who is looking for a lucid narration on a topic of common interest. Academics will find it interesting because of its historical updating and novelty of treatment. University students of economics will find this work an invaluable resource.
