Management Accounting and Control - Michel Charifzadeh 2017-10-30

Management accounting has been the basic toolbox in business administration for decades. Today it is an integral part of all curricula in business education and no student can afford not to be familiar with its basic concepts and instruments. At the same time, business in general, and management accounting in particular, is becoming more and more international. English clearly has evolved as the "lingua franca" of international business. Academics, students as well as practitioners exchange their views and ideas, discuss concepts and communicate with each other in English. This is certainly also true for management accounting and control. Management Accounting is becoming more and more international. ?Management Accounting and Control? is a new textbook in English covering concepts and instruments of management accounting at an introductory level (primarily at the Bachelor level, but also suited for general management and MBA courses due to a strong focus on practical relevance). This textbook covers all topics that are relevant in management accounting in business organizations that are typically covered in German and Central European Bachelor courses on management accounting and control. After a general introduction to the field of management accounting and control the book discusses cost management as an extension of cost accounting. Typical cost management instruments such as target costing, life cycle costing and process-based costing approaches are explained in detail. Differences between Anglo-American activity-based costing (ABC) and German process-based costing are highlighted. The book then turns to an extensive discussion of planning and budgeting tasks in management accounting with a strong focus on the practical application of the topic such as developing a budget in practice. Another chapter is dedicated to a comparison of traditional budgeting with modern /alternative budgeting approaches. A major part of the book is dedicated to the broad area of performance management. The relevance of financial statement information for performance management purposes is discussed in detail. In addition, the most widely spread financial performance indicators are illustrated using real-world examples. The book also includes detailed content on value-based management control concepts. In a consecutive chapter, performance measurement is linked with strategy while extensively discussing the Balanced Scorecard as a key tool in strategic performance management. The remaining parts of the book deal with management reporting as one of the main operative tasks in management accounting practice. The book closes with insight into new fields and developments that currently influence management accounting practices and research and promise to play an increasingly important role in the future.

Research in Management Accounting - Ruhanita Maelah 2010-10-12

This book focuses on research in management accounting that uses Malaysia's business environment as the scope of study. The motivation to embark on this publication was due to the recognition that although management accounting has received increasing interest from various organizations including government, businesses and educators, published documents that report findings from research in management accounting undertaken in Malaysia are still limited. The objective of this book is to address the gap by

providing readers with five research oriented articles on management accounting issues, namely Performance Measurement Design in Service Organizations; Management Accounting and Control Systems in the Service Sector; Activity Based Costing; Intellectual Capital and Management Accounting Practices; and Customer Focused Manufacturing Strategy and Performance Measurement Systems. The articles are written by a pool of active researchers in the area of management accounting, and are expected to have high academic value. Each is complete with a literature review, methodology, data analysis and references. Even though this is the case, the articles have also been carefully chosen and edited for the general reader. This book is suitable as a reference for researchers, academics, managers, accountants, and policy makers.

The Socio-Economic Approach to Management Revisited - Anthony F. Buono 2015-05-01

This volume is part of the ongoing collaboration between the RMC series and the Socio-Economic Institute for Firms and Organizations (ISEOR), a French intervention-research think tank co-directed by Henri Savall and Véronique Zardet. Building on an earlier collaboration on the ISEOR approach - Socio-Economic Intervention in Organizations: The Intervener-Researcher and the SEAM Approach to Organizational Analysis (IAP, 2007) - Buono and Savall bring together over 30 talented intervener-researchers to explore and examine the ongoing evolution of the Socio-Economic Approach to Management (SEAM). This volume revisits the application of SEAM in the context of intervention challenges in the wake of the recent economic crisis and the disruptive change that has taken hold across the world. The basic foundation of SEAM - built on the idea of strategic patience, the need to undertake holistic intervention in organizations, and the challenge to get organizational members to listen to themselves (through what they refer to as the mirror effect) - has remained the same. In response to economic and organizational pressures in the current environment, however, there has been a concomitant emphasis on helping client organizations achieve short-term results while still maintaining focus on the long term. Many ideas that have become part of the current discourse within ISEOR today were not as explicitly addressed in the initial volume - from the destructive effect of the Taylorism-Fayolism-Weberism (TFW) virus, to the need to focus on ways to ensure the sustainability of a SEAM intervention, the growing importance of collaborative interactions between external and internal consultants, and the growing importance of cocreating knowledge with client firms and organizations.

Setting Performance Targets - Carolyn Stringer 2012-01-13

Targets are an important part of our work life, whether we are setting them or meeting them. Target setting forms part of the budgeting process and the performance management of business units and individuals. Unfortunately the behavioral impacts of target setting on performance are not well understood, and this can lead to serious consequences such as game playing. Target setting is an under-researched area. This book will help you fill the gap in target setting for performance. The pivotal issue in target setting is that it is an art as well as a science. Perhaps more of an art, requiring a balance between the psychologies of the people taking initiatives, the science of estimating probabilities and aligning with strategies, coupled with the effects of incentives. Another feature of this book is how the authors drew on ideas and research across disciplines, which is rarely done in this field. Inside this book, you will be introduced to some of the important methods in target setting such as forecasting, sensitivity analysis, and probability analysis; all of which include practical examples to show how these techniques can be directly applied. In the end, you'll learn how interrelated the various parts of organizational activities are and how they impact on each other, which is important since target setting must include an understanding of the organizational context (e.g., people, competitive environment, structure, strategy) as well as the impact of incentive compensation and information flows.

Financial Accounting and Management Control - Fredrik Nilsson 2015-02-20

This book is about financial accounting and management control and how these two information systems are related as well as how their objectives conflict. At the most fundamental level, the objective of financial accounting is to provide owners and funders with comparable information on a company's value creation. The aim of management control, on the other hand, is to give the board, senior executives and employees unique information for strategy formulation and implementation. One often-mentioned negative effect is the risk of financial accounting affecting management control design and use, making it less relevant for decision-making at the company level. The book provides an analysis of the complex relationship between financial accounting and management control. The analysis is based on theoretical reasoning as well as several examples of how financial accounting standards affect not only the annual report but also the control system. An interesting, and perhaps unexpected conclusion is that management control seems to affect financial accounting almost as much as financial accounting affects management control. These complex relationships, which can influence the design and use of both financial accounting and management control, are discussed in detail in this book.

Generation Y in Consumer and Labour Markets explores the role of people born in the late 1970s and 1980s as consumers and coworkers in an emerging post-modernist society. Having grown up in a branded society overcrowded with commercial messages and a never-ending supply of choices and opportunities, Generation Y not only influences consumption patterns, they also bring their values to work life, thus changing the attitudes towards the employee-employer relationship and how work is being done. This book delves into the substantial research body on characteristics and behaviors of the Generation Y, including their relation to other generations and the role of understanding generations in developing effective and attractive organizations. It further outlines the experiences and best practice for attracting, recruiting, selling to, and communicating with Generation Y, based on the author's experiences from hundreds of organizations where he has been involved as a consultant - offering the reader a better understanding of generations in marketing research, and the impact of generations in employee-employer relations.
