Lesson Study Research and Practice in Mathematics Education - Lynn C. Hart
2011-01-11

Lesson study is a professional development process that teachers engage in to systematically examine their practice, with the goal of becoming more effective. Originating in Japan, lesson study has gained significant momentum in the mathematics education community in recent years. As a process for professional development, lesson study became

highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat elusive and composed of discrete research endeavors. As a new research area there is no coherent knowledge base yet. This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others: it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching.

ICSSSED 2020 - Muhammad Nur Sa'ban
2020-11-04

The theme of the conference is "Reconstructing Morals, Education, and Social Sciences for Achieving Sustainable Development Goals". This theme was formulated due to several considerations. First, the symptoms of moral decline that have the potential to destroy the nation. Morals guide humanity towards truth and civilization. The phenomenon of the dehumanization process in the industrial era that pushed people to be part of abstract societies tends to ignore humanity. The education process as a humanitarian system is increasingly marginalized, especially during discussions about the industrial revolution 4.0 and Society 5.0. The conference placed six sub-themes for speakers and participants to share ideas, namely: Social Sciences and Laws, History and Cultural Studies, Interdisciplinary Studies, Morals and Humanities, Policy, Politics, and Communication, Education. The committee has received 195 abstracts from prospective speakers. However, there are only 80 abstracts

that are eligible to be presented at this conference.

Quality Management in Education - Pamela Lomax 1996

This book describes the work of a number of professionals who have used action research to improve the quality of their organization and their classrooms. Underpinning all the accounts is the idea that shared values and a shared vision are central to improvement in education. The accounts show how the writers use action research methods to question traditionally held assumptions and interpretations about

educational management and classroom practice. They are then able to put forward new theories and strategies which will help other educators to achieve a higher quality of education. The book provides valuable source material for all those involved in professional development, research methodology or educational management.

Diálogos: Placemaking in Latino

Communities - Michael Rios 2012-06-25

Latinos are one of the largest and fastest growing social groups in the United States, and their increased presence is profoundly shaping the character of urban, suburban, and rural places. This is a response to these developments and is the first book written for readers seeking to learn about, engage and plan with Latino communities. It considers how placemaking in marginalized communities sheds light on, and can inform, community-building practices of professionals and place dwellers alike. *Diálogos: Placemaking in Latino Communities* will help

readers better understand the conflicts and challenges inherent in placemaking, and to make effective and sustainable choices for practice in an increasingly multi-ethnic world. The essays explore three aspects of place: the appropriation and territorialization of the built environment, the claiming of rights through collective action, and a sense of belonging through civic participation. The authors illustrate their ideas through case studies and explain the implications of their work for placemaking practice. A consistent theme about planning and design practice in Latino communities emerges throughout the book: placemaking happens with or without professional planners and designers. All of the essays in *Diálogos* demonstrate the need to not only imagine, build, and make places with local communities, but also to re-imagine how we practice democracy inclusive of cross-cultural exchange, understanding, and respect. This will require educators, students, and working professionals to incorporate the

knowledge and skills of cultural competency into their everyday practices.

The Good in Nature and Humanity - Stephen R. Kellert 2013-04-10

Scientists, theologians, and the spiritually inclined, as well as all those concerned with humanity's increasingly widespread environmental impact, are beginning to recognize that our ongoing abuse of the earth diminishes our moral as well as our material condition. Many people are coming to believe that strengthening the bonds among spirituality, science, and the natural world offers an important key to addressing the pervasive environmental problems we face. *The Good in Nature and Humanity* brings together 20 leading thinkers and writers -- including Ursula Goodenough, Lynn Margulis, Dorion Sagan, Carl Safina, David Petersen, Wendell Berry, Terry Tempest Williams, and Barry Lopez -- to examine the divide between faith and reason, and to seek a means for developing an environmental ethic

that will help us confront two of our most imperiling crises: global environmental destruction and an impoverished spirituality. The book explores the ways in which science, spirit, and religion can guide the experience and understanding of our ongoing relationship with the natural world and examines how the integration of science and spirituality can equip us to make wiser choices in using and managing the natural environment. The book also provides compelling stories that offer a narrative understanding of the relations among science, spirit, and nature. Grounded in the premise that neither science nor religion can by itself resolve the prevailing malaise of environmental and moral decline, contributors seek viable approaches to averting environmental catastrophe and, more positively, to achieving a more harmonious relationship with the natural world. By bridging the gap between the rational and the religious through the concern of each for understanding the human relation to

creation, *The Good in Nature and Humanity* offers an important means for pursuing the quest for a more secure and meaningful world.

Curriculum Development - Daniel Tanner
1980

With its focus on the application of theory to actual classroom practice, this book's treatment of the full spectrum of curriculum design and practice has set the standard for completeness for nearly two decades. Part I explores the historical roots of current curriculum issues and practices, emphasizing the assessment of leading efforts at reform. Part II offers a critique of changing concepts of curriculum, conflicting curriculum and educational rationales, and influences for and against change. In Part III, major crosscurrents in reform and reconstruction are discussed, including social crises, the "knowledge explosion", curriculum articulation, and emerging designs. Part IV focuses on curriculum research and improvement, paying particular attention to the

roles of teachers, supervisors, administrators, and curriculum specialists in the process.

Elementary Science Methods: A Constructivist Approach - David Jerner Martin 2012-12-20

The text that pioneered a constructivist approach to elementary science teaching is based on two fundamental and complementary ideas: that it's more important for children to learn how to do science than to learn about science, and that elementary science teachers needing to know a great deal of science, but rather should be co-inquirers with their students. **ELEMENTARY SCIENCE METHODS: A CONSTRUCTIVIST APPROACH**, Sixth Edition, features a wealth of exercises, including open-ended inquiry activities that help teacher candidates construct their own conceptualizations about science content and teaching methods. More than 170 process-oriented, open-ended activities, organized by grade level, can be used to encourage children to develop and perform their own investigations. All activities and much of the text content are clearly linked to National Science Education Standards (NSES) for content, professional development, assessment, and teaching. Also

included are suggestions for appropriate children's literature to encourage interdisciplinary learning. The book's website, Education CourseMate, provides valuable tools and resources such as additional activities and video clips that students can use both in their college course and later in elementary science classrooms. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Supervisory Leadership emphasizes leadership practices and covers the concepts, principles, and skills needed to be a successful supervisor. This new, well-researched and comprehensive book describes the supervisor's work with teachers as moving from a deficit model (helping) to a collegial, cooperative, mentoring approach. It also provides helpful connections that describe and support the role of supervisors in school culture. The authors provide a view of contemporary supervisory practice with particular attention given to the importance of

past practices, the work place and culture, leadership qualities, communication skills, models and mechanics of the supervision process, and the process of change and decision-making. Written in a language that is easily understood, Supervisory Leadership provides an interactive, realistic and meaningful learning experience that offers continuous opportunities for readers to reflect upon their own leadership skills development. For supervisors and educational administrators.

Principles of Management - Charles W. L. Hill
2007-01-01

Course: Principles of Management is the introductory course taken by most undergraduate business majors. Almost every text/course is organized around the four functions of management: planning, leading, organizing, and controlling (PLOC). What makes the texts different are their approach to the subject (principles vs. OB focused) and their strengths of coverage (high/strategic vs. low

level/applied/skills). The aim of this text is to show how the four functions interact.

A Distant Melody (Wings of Glory Book #1) - Sarah Sundin 2010-03-01

Raising Good Children - Thomas Lickona
2012-05-02

Raising decent, caring, and responsible children is the most complex and challenging job in every parent's life—and an increasingly difficult one in today's society. Here is the most authoritative book available on this crucial subject, a valuable and sensitive guide for parents who want their children to grow up with lifelong positive values. Based on fascinating research, this groundbreaking work by psychologist and educator Dr. Thomas Lickona describes the predictable stages of moral development from birth to adulthood. And it offers you down-to-earth advice and guidance for each stage:

- Seven caring ways to discipline “terrible twos”
- Why your preschooler “lies” and how to handle it
- What to do about a four-year-old's back talk
- How to handle your seven-year-old's endless negotiations about what's “fair”
- Why teens have trouble with peer pressure—and how to help them
- How to talk to your child about

drugs, drinking, and sex • How to help children of any age reason more clearly about what's right and wrong PLUS . . . A list of more than one hundred children's books that teach moral values, and much more. "An excellent book on a vastly neglected aspect of raising children."—Dr. Fitzhugh Dodson, author *How to Parent, How to Father* "We have been waiting for a book like this for a long time—a readable work that translates a moral development into parents' language and experience."—Dolores Curran, author of *Traits of a Healthy Family* "Truly

integrates a moral development theory into a consistent approach to childrearing. . . Word-of-mouth recommendations from parent to parent may lift it to the level of popularity once held by Dr. Spock's book on child care."—Moral Education Forum
