**Cutting Edge Conversations** - EJ 'Ted' Cutting 2019-06-13

EJ 'Ted' Cutting was not only Aston Martin's most successful Chief Race Car Design Engineer, but was also an innovator with influential force on the worldwide automotive industry. Originating from a limited edition hardback version, this eBook was produced in celebration of the 60th anniversary of Aston Martin winning the World Sports Car Championship for Britain with the all-conquering DBR1 designed, engineered and created by Ted himself. Rather than a traditional biography of his life, Ted wanted his book to be rather less scripted and informal; it was therefore initially adapted from a number of recorded conversations between himself and Aston Martin Heritage Trust members Stuart Bailey and Brian Joscelyne - the title being an obvious choice considering this! In addition to the in-depth telling of a legendary period in British motorsport by a man at the centre of it all, the book also sees Ted clarify a number of details which have in the past been incorrectly reported. Unusually it also contains all his published documents and access to a 90 minute video of his unique lecture on 'Racing Astons' to further endorse his story. Although the original hardback edition of this book was

produced only in a limited run, Ted's wish was to make the complete book available to a much wider audience, now possible through the internet; as an engineer always working at the cutting edge of technology, he would appreciate the benefits of information sharing in the digital age. As well as being of interest to fans of Aston Martin and of motorsports in general, the book is a compelling read for any student of automotive design and engineering; after all, progress is about standing on the shoulders of giants - and in the field of race car design, few individuals ever reach the colossal heights achieved by Ted Cutting.

### **The effective reorganization of BMW Group applied to the New MINI** - Johannes-Cornelius Adari 2004-08-11

Inhaltsangabe:Abstract: The story of the automobile manufacturer production can not be told without the story of Henry Ford, who was one of the pioneers constructing his first horseless carriage in 1896. He incorporated the Ford Motor Company in 1903, proclaiming I will build a car for the great multitude . As predicted he did so in 1908 offering a Model T for \$ 950. This model heralds the beginning of the motor age. The car evolved from a former luxury item for the well-to-do to essential transportation for the ordinary man. Ford also revolutionized automobile manufacturing, in 1914 the Ford plant used innovation production techniques and was able to turn out a complete chassis every 95 minutes. That was a revolution in the automobile manufacturing at the time, because the former production time took about 730 minutes to turn out a complete chassis! Ford achieved that fast production time by using a constantly moving assembly line, subdivision of labor, careful coordination of operations and he began to pay nearly double the wages offered by their competitors. His innovations made him an international celebrity in the industrial revolution and he was one of the first who thought about effective organization to achieve a higher productivity. Ford s methods that changed the automobile production were perhaps not mainly the introduction of the assembly line, his goal was also to constantly standardizing the use of craftsmen. That firstly resulted in a high product variety despite in fact that they had been made using the same drawing. Secondly a lot of time was spent in fitting the parts together. These facts influenced major loss in productivity and under such circumstances a real mass-production was not possible. But by standardizing components and developing work routines was the first scope for an assembly line approach. The target of our case study is to present and analyze the changes in companies organizations, applied to the example of BMW. The opening part will summarize the history of the working and organizing techniques in general. The middle part will focus

on the changes in production organization in the automotive industry, followed by the last part analyzing new strategies in Sales & Marketing regarding the rebirth of MINI by the BMW Group. Zusammenfassung: Die vorliegende englischsprachige Projektarbeit behandelt das Thema effektive Reorganisation in Produktion, Vertrieb und Marketing in der Automobilindustrie am [...]

### **Classic Mini** - Henry Hirst 2021-07-30

Voted the second most influential car of the 20th century after the Model T Ford in 1999, the original Mini – as Sir Alec Issigonis’ classic design of 1959 inevitably became known – was a car that helped to define an era. In an age when London was swinging, when Carnaby Street and the King’s Road in Chelsea were perceived as the style capital of the world, the Mini was the last word in ‘cool’ motoring. Pictured with the stars of the age, including the designer Mary Quant, the car was to be successful in motor sport and, as one of the last great products of British designed engineering. In production for more than 50 years, by which stage almost 5.4 million of the model in its various guises had been made worldwide, the original Mini was to be supplanted in 2000 by a newer and larger model – the MINI – produced, (following the takeover of Rover Group) by the German company BMW. This is the story of the Mini and MINI in its various guises throughout its fascinating history.

**Microscale Combustion and Power Generation** - Christopher Cadou 2014-12-26

Recent advances in microfabrication technologies have enabled the development of entirely new classes of small-scale devices with applications in fields ranging from biomedicine, to wireless communication and computing, to reconnaissance, and to augmentation of human function. In many cases, however, what these devices can actually accomplish is limited by the low energy density of their energy storage and conversion systems. This breakthrough book brings together in one place the information necessary to develop the high energy density combustion-based power sources that will enable many of these devices to realize their full potential. Engineers and scientists working in energy-related fields will find:

- An overview of the fundamental physics and phenomena of microscale combustion;
- Presentations of the latest modeling and simulation techniques for gasphase and catalytic micro-reactors;
- The latest results from experiments in small-scale liquid film, microtube, and porous combustors, micro-thrusters, and micro heat engines;
- An assessment of the additional research necessary to develop compact and high energy density energy conversion systems that are truly practical.
