Lesson Study Research and Practice in Mathematics Education - Lynn C. Hart 2011-01-11

Lesson study is a professional development process that teachers engage in to systematically examine their practice, with the goal of becoming more effective. Originating in Japan, lesson study has gained significant momentum in the mathematics education community in recent years. As a process for professional development, lesson study became highly visible when it was proposed as a means of supporting the common practice of promoting better teaching by disseminating documents like standards, benchmarks and nationally validated curricula. While the body of knowledge about lesson study is growing, it remains somewhat

elusive and composed of discrete research endeavors. As a new research area there is no coherent knowledge base yet. This book will contribute to the field bringing the work of researchers and practitioners together to create a resource for extant work. This book describes several aspects of Lesson Study, amongst others: it gives an historical overview of the concept, it addresses issues related to learning and teaching mathematics, it looks at the role of the teacher in the process. The last two sections of the book look at how lesson Study can be used with preservice mathematics teachers and at university mathematics methods teaching.

The Good in Nature and Humanity - Stephen R. Kellert 2013-04-10

Scientists, theologians, and the spiritually inclined, as well as all those concerned with humanity's increasingly widespread environmental impact, are beginning to recognize that our ongoing abuse of the earth diminishes our moral as well as our material condition. Many people are coming to believe that strengthening the bonds among spirituality, science, and the natural world offers an important key to addressing the pervasive environmental problems we face. The Good in Nature and Humanity brings together 20 leading thinkers and writers -- including Ursula Goodenough, Lynn Margulis, Dorion Sagan, Carl Safina, David Petersen, Wendell Berry, Terry Tempest Williams, and Barry Lopez -- to examine the divide between faith and reason, and to seek a means for developing an environmental ethic that will help us confront two of our most imperiling crises: global environmental destruction and an impoverished spirituality. The book explores the ways in which science, spirit, and religion can guide the experience and understanding of our ongoing relationship with the natural world and examines how the integration of science and spirituality can equip us to make wiser choices in using and managing

the natural environment. The book also provides compelling stories that offer a narrative understanding of the relations among science, spirit, and nature. Grounded in the premise that neither science nor religion can by itself resolve the prevailing malaise of environmental and moral decline, contributors seek viable approaches to averting environmental catastrophe and, more positively, to achieving a more harmonious relationship with the natural world. By bridging the gap between the rational and the religious through the concern of each for understanding the human relation to creation, *The Good in Nature and Humanity* offers an important means for pursuing the quest for a more secure and meaningful world.

Diálogos: Placemaking in Latino Communities - Michael Rios 2012-06-25

Latinos are one of the largest and fastest growing social groups in the United States, and their increased presence is profoundly shaping the character of urban, suburban, and rural places. This is a response to these developments and is the first book written for readers seeking to learn about, engage and plan with Latino communities. It considers how placemaking in marginalized communities sheds light on, and can inform, community-building practices of professionals and place dwellers alike. *Diálogos: Placemaking in Latino Communities* will help readers better understand the conflicts and challenges inherent in placemaking, and to make effective and sustainable choices for practice in an increasingly multi-ethnic world. The essays explore three aspects of place: the appropriation and territorialization of the built environment, the claiming of rights through collective action, and a sense of belonging through civic participation. The authors illustrate their ideas through case studies and explain the implications of their work for placemaking practice. A consistent theme about planning and design practice in Latino communities emerges throughout the book: placemaking happens with or without professional planners and designers. All of the essays in *Diálogos* demonstrate the need to not only imagine, build, and make places with local communities, but also to re-imagine how we practice democracy inclusive of cross-cultural exchange, understanding, and respect. This will require educators, students, and working professionals to incorporate the knowledge and skills of cultural competency into their everyday practices.
