*The Persistence of Technology* - Stefan Krebs 2021-09-30  
Repair, reuse and disposal are closely interlinked phenomena related to the service lives and persistence of technologies. When technical artefacts become old and worn out, decisions have to be taken: is it

necessary, worthwhile or even possible to maintain and repair, reuse or dismantle them - or must they be discarded?

These decisions depend on factors such as the availability of second-hand markets, repair infrastructures and dismantling or disposal facilities. In telling the stories of China's power grid, Canadian telephones, German automobiles and India's shipbreaking business, among others, the contributions in this volume highlight the persistence of technologies and show that maintenance and repair are not obsolete in modern industries and consumer societies.

**Stirling Engine Design**

**Manual** - William Martini

2013-01-25

For Stirling engines to enjoy  
widespread application and  
acceptance, not only must the  
fundamental operation of such  
engines be widely understood,  
but the requisite analytic tools  
for the stimulation, design,  
evaluation and optimization of  
Stirling engine hardware must  
be readily available. The  
purpose of this design manual

is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. This report was originally prepared for the National Aeronautics and Space Administration and the U. S. Department of Energy.

**LDS Preparedness Manual** - Christopher Parrett 2008-10-01

Dressing for Altitude - Dennis R. Jenkins 2012-08-27

"Since its earliest days, flight has been about pushing the limits of technology and, in many cases, pushing the limits of human endurance. The human body can be the limiting factor in the design of aircraft and spacecraft. Humans cannot survive unaided at high altitudes. There have been a number of books written on the subject of spacesuits, but the literature on the high-altitude pressure suits is lacking. This volume provides a high-level summary of the technological development and operational use of partial- and full-pressure suits, from the earliest models

to the current high altitude, full-pressure suits used for modern aviation, as well as those that were used for launch and entry on the Space Shuttle. The goal of this work is to provide a resource on the technology for suits designed to keep humans alive at the edge of space."--NTRS Web site.

### **The Structuring of Organizations** - Henry Mintzberg 1979

How do organizations structure themselves? A synthesis of the

empirical literature in the field, supported by numerous examples and illustrations, provides images that produce a theory. The author introduces five basic configurations of structure - the simple structure, the machine bureaucracy, the professional bureaucracy, the divisionalized form, and the adhocracy. This book reveals that structure seems to be at the root of many questions about organizations and why they function as they do.
