Food Safety Economics - Tanya Roberts  
2018-12-21

This book examines the economic incentives for food safety in the private marketplace and how public actions have helped shape those incentives. Noted contributors analyze alternative public health protection efforts and the benefits and costs associated with these actions to understand: why an excess of foodborne illness occurs what policies have worked best how regulations have evolved what the path forward to better control of pathogens in the U.S. and the international food supply chain might look like While the first third of the book builds an economic framework, the remaining chapters apply economics to specific food safety issues. Numerous chapters explore economic decision making within individual companies, revealing the trade-offs of the costs of food safety systems to comply with regulations vs. non-compliance which carries costs of possible penalties, reputation damage, legal liability suits, and sales reduction. Pathogen control costs are examined in both the short run and long run. The book's unique application of economic theory to food safety decision making in both the public and private sectors makes it a key resource for food safety professionals in academia, government, industry, and consumer groups around the world. In addition to Benefit/Cost Analysis and economic incentives, other economic concepts are applied to food safety supply chains, such as, principal-agent theory and the economics of information. Authors provide real world examples, from Farm-to-Fork, to showcase these economic concepts throughout the book.

European pork chains - Jacques Trienekens  
2009-03-07

In this book the results are presented of a comprehensive inventory of pork chains that has been conducted through expert interviews and in-depth case studies. The main focus of the book is on how well diverse and fragmented supply in the European pork sector matches differentiating demands for pork products in rapidly evolving markets. One of the central topics discussed in the book is management of quality in diverse mainstream and specialty European pork chains. Inter-enterprise information systems, governance forms, logistics and sustainability aspects of European pork chains are also presented, as well as a number of interesting innovations in the chains. 'European pork chains' consists of four chapters that discuss the European pork chain as a whole and nine chapters that present case studies. The latter comprise three specialty pork chains (Iberian ham from Spain, Mangalica pork from Hungary, and organic pork from the Netherlands) and three regional pork chains in Europe (a Greek integrated chain, the German 'Eichenhof' chain and the French 'Cochon de Bretagne' chain). To enable comparison with chains outside Europe, a review of pork chains in China, Canada, Brazil and South Africa has been included. The book gives a comprehensive picture of the structure, functioning and challenges of the European pork sector. It is intended to be a valuable source of information for practitioners as well as scientists.

Sameness in Diversity - Laresh Jayasanker

2020-04-14

Americans of the 1960s would have trouble navigating the grocery aisles and restaurant menus of today. Once-exotic ingredients—like mangoes, hot sauces, kale, kimchi, and coconut milk—have become standard in the contemporary American diet. Laresh Jayasanker explains how food choices have expanded since the 1960s: immigrants have created demand for produce and other foods from their homelands; grocers and food processors have sought to market new foods; and transportation improvements have enabled food companies to bring those foods from afar. Yet, even as choices within stores have exploded, supermarket chains have consolidated. Throughout the food industry, fewer companies manage production and distribution, controlling what American consumers can access. Mining a wealth of menus, cookbooks, trade publications, interviews, and company records, Jayasanker explores Americans' changing eating habits to shed light on the impact of immigration and globalization on American culture.

Meat Then and Now - Dell M. Allen 2022-06-09

As the population of the United States expanded and moved westward, the meat and livestock industry expanded as well. Animals were essential not only for food and other products, but also as a source of power for pulling wagons and farm equipment. The parallel development of railroads was instrumental in the efficient transport for both livestock and meat during America's rapid growth in the 1800s and early 1900s. An entire industry was developed to raise, market, slaughter, and process meat for the nation's citizens, and this fascinating book provides extensive histories of early meat companies. Researched with authoritative and meticulous detail by a leading expert in the field of meat and food safety, *Meat Then and Now* will give you perspective on the industry, rooted in the history of America's development.

*Frontiers of Development in the Amazon* - Antonio Augusto Rosotto Ioris 2020-06-22  
*Frontiers of Development in the Amazon: Riches, Risks, and Resistances* contributes to ongoing debates on the processes of change in the Amazon, a region inherently tied to the expansion of internal and external socio-economic and environmental frontiers. This book offers interdisciplinary analyses from a range of scholars in Europe, Latin America, and the United States that question the methods of development and the range of socio-ecological impacts of those methods by examining the theoretical, methodological, and empirical dimensions of frontier-making along with evaluating and refining existing frameworks. Contributors focus on the complex politics of border formation shaped by institutional,

economic, and political forces, placing them in relation to ethical, imaginary, and symbolic elements. In doing so, contributors explore the dynamic production of identities, values, and subjectivities, covering matters of migratory patterns, complex power struggles, and intensive—at times violent—clashes. Among other topics, this book assesses the recent encroachment of export-driven agribusiness into the Amazon Region in the context of recolonization, resource exploitation and multiple programs of modernization and national integration. Scholars of Latin American studies, international development, environmental studies, and applied social sciences will find this book particularly useful.

The Financialization of Agri-Food Systems -

Hilde Bjorkhaug 2018-09-03

Financialization is the increased influence of financial actors and logics on social and economic life, and is one of the key drivers transforming food systems and rural economies around the world. The premise of this book is that the actions of financial actors, and their financial logics, are transforming agri-food systems in profound ways. It is shown that although financialization is a powerful dynamic, some recent developments suggest that the rollout of financialization is contradictory and uneven in different spaces and markets. The book examines cases in which state regulation or re-regulation and social movement resistance are setting roadblocks or speed bumps in the path of financialization, resulting in a 'cooling off' of investment, as well as the other side of the argument where there is evidence of a 'heating up'. The authors address not only the limits to financialization, but also the mechanisms through which financial entities are able to penetrate and re-shape agri-food industries. This book provides both a comparative analysis of financialization blending, and empirical findings with conceptual insights. It explores the connection between financialization, food systems, and rural transformation by critically examining: the concept of financialization and how food and farming are being financialized; the impacts of financialization in the food industry; and

financialization in farming and forestry - along with the impacts this has on rural people and communities. This is a timely book, bringing together concrete case studies, from around the globe, to reveal the operations and impacts of finance capital in the 'space' of agri-food.

In Defense of Farmers - Jane Winslow Gibson 2019-07

Industrial agriculture is generally characterized as either the salvation of a growing, hungry, global population or as socially and environmentally irresponsible. Despite elements of truth in this polarization, it fails to focus on the particular vulnerabilities and potentials of industrial agriculture. Both representations obscure individual farmers, their families, their communities, and the risks they face from unpredictable local, national, and global conditions: fluctuating and often volatile production costs and crop prices; extreme weather exacerbated by climate change; complicated and changing farm policies; new production technologies and practices; water availability; inflation and debt; and rural community decline. Yet the future of industrial agriculture depends fundamentally on farmers' decisions. *In Defense of Farmers* illuminates anew the critical role that farmers play in the future of agriculture and examines the social, economic, and environmental vulnerabilities of industrial agriculture, as well as its adaptations and evolution. Contextualizing the conversations about agriculture and rural societies within the disciplines of sociology, geography, economics, and anthropology, this volume addresses specific challenges farmers face in four countries: Bolivia, Brazil, Canada, and the United States. By concentrating on countries with the most sophisticated production technologies capable of producing the largest quantities of grains, soybeans, and animal proteins in the world, this volume focuses attention on the farmers whose labors, decision-making, and risk-taking throw

into relief the implications and limitations of our global industrial food system. The case studies here acknowledge the agency of farmers and offer ways forward in the direction of sustainable agriculture.

Geographies of Meat - Harvey Neo 2017-03-16  
With the ever rising demand for meat around the world, the production of meat has changed dramatically in the past few decades. What has brought about the increasing popularity and attendant normalization of factory farms across

many parts of the world? What are some of the ways to resist such broad convergences in meat production and how successful are they? This book locates the answers to these questions at the intersection between the culture, science and political economy of meat production and consumption. It details how and why techniques of production have spread across the world, albeit in a spatially uneven way. It argues that the modern meat production and consumption sphere is the outcome of a complex matrix of cultural politics, economics and technological faith. Drawing from examples across the world (including America, Europe and Asia), the tensions and repercussions of meat production and consumption are also analyzed. From a geographical perspective, food animals have been given considerably less attention compared to wild animals or pets. This book, framed conceptually by critical animal studies, governmentality and commodification, is a theoretically driven and empirically rich study that advances the study of food animals in geography as well as in the wider social sciences.
