psychological disorders found among the general population. They can

be serious, distressful, and functionally impairing, so much so that there

has been an explosion of interest in their treatment, primarily from

pharmacological and cognitive-behavioral perspectives. Addressing these

perspectives is the Second Edition of Child Anxiety Disorders. Beidel and

Alfano pay close attention to new pharmacological and psychological

interventions as well as multi-center trials that compare single and

combined treatment modalities. Additionally, they include new case

studies, sections on stability of childhood fears and the longitudinal

E-Commerce Strategy - Sanjay Mohapatra 2012-08-16

E-Commerce Strategy: Text and Cases provides the fundamental

literature required for graduate students and practitioners to understand

electronic commerce. Each chapter provides clearly designed learning

objectives and review questions to highlight the major topics and goals.

This book covers many of the new innovations and technologies that have

been established for e-commerce site development. Unlike similar books,

topics such as e-channel adoption, factors affecting e-commerce

adoption, and strategy design are reviewed in greater depth.

Additionally, the book examines areas not normally covered like open

source, online research, and peer-to-peer systems. E-Commerce

Strategy: Text and Cases is divided into two parts. Part 1 examines the

evolution of e-commerce, analyzes different sectors such as B2B and m-

Commerce, and explores the challenges they face. Case studies of well

known companies reinforce the concepts learned to demonstrate both

successes and failures in the field. Part 2 deals with developing

strategies in e-Commerce and looks at future trends including Web 2.0.

Overall, the useful guidelines provided should prove valuable to students

and researchers in the field.

Certification's Impacts on Forests, Stakeholders and Supply Chains - 2001

People like forests- they have many emotional and cultural attachments to them. They also like forest products - and need increasing quantities of them. But they often don't like, don't understand, and don't trust what comes in between: forest management, which lies at the interface of public services (biodiversity, watersheds, etc) and private goods (timber, food, etc). Certification was developed to independently verify the quality of forest management, to communicate this to market players, and so to improve market benefits for the products of good management. The growing influence of the Forest Stewardship Council is one of the most striking recent developments in forestry. Certification is increasingly common in all continents. But has it actually improved forest management? Has it created sufficient market incentives? Above all, has it enabled trust to develop between stakeholders, so that they can work together better, to build the institutions required for sustainable forest management? This book is the result of two years' study by IIED and collaborators in several countries: it provides evidence for considerable policy and institutional change as a result of certification, and the beginnings of change in forest and market practice.

Reading Law - Antonin Scalia 2012

In this groundbreaking book, Scalia and Garner systematically explain all the most important principles of constitutional, statutory, and contractual interpretation in an engaging and informative style with hundreds of illustrations from actual cases. Is a burrito a sandwich? Is a corporation entitled to personal privacy? If you trade a gun for drugs, are you using a gun in a drug transaction? The authors grapple with these

and dozens of equally curious questions while explaining the most principled, lucid, and reliable techniques for deriving meaning from authoritative texts. Meanwhile, the book takes up some of the most controversial issues in modern jurisprudence. What, exactly, is "textualism?" Why is "strict construction" a bad thing? What is the true doctrine of "originalism?" And which is more important: the spirit of the law, or the letter? The authors write with a well-argued point of view that is definitive yet nuanced, straightforward yet sophisticated.

Reading Machines - Stephen Ramsay 2011-12-01

Besides familiar and now-commonplace tasks that computers do all the time, what else are they capable of? Stephen Ramsay's intriguing study of computational text analysis examines how computers can be used as "reading machines" to open up entirely new possibilities for literary critics. Computer-based text analysis has been employed for the past several decades as a way of searching, collating, and indexing texts. Despite this, the digital revolution has not penetrated the core activity of literary studies: interpretive analysis of written texts. Computers can handle vast amounts of data, allowing for the comparison of texts in ways that were previously too overwhelming for individuals, but they may also assist in enhancing the entirely necessary role of subjectivity in critical interpretation. Reading Machines discusses the importance of this new form of text analysis conducted with the assistance of computers. Ramsay suggests that the rigidity of computation can be enlisted in the project of intuition, subjectivity, and play.

Gesture and Power - Yolanda Covington-Ward 2015-12-02

In Gesture and Power Yolanda Covington-Ward examines the everyday embodied practices and performances of the BisiKongo people of the Lower Congo to show how their gestures, dances, and spirituality are critical in mobilizing social and political action. Conceiving of the body as the center of analysis, a catalyst for social action, and as a conduit for the social construction of reality, Covington-Ward focuses on specific flash points in the last ninety years of Congo's troubled history, when embodied performance was used to stake political claims, foster dissent, and enforce power. In the 1920s Simon Kimbangu started a Christian prophetic movement based on spirit-induced trembling, which swept through the Lower Congo, subverting Belgian colonial authority. Following independence, dictator Mobutu Sese Seko required citizens to dance and sing nationalist songs daily as a means of maintaining political control. More recently, embodied performance has again stoked reform, as nationalist groups such as Bundu dia Kongo advocate for a return to precolonial religious practices and non-Western gestures such as traditional greetings. In exploring these embodied expressions of Congolese agency, Covington-Ward provides a framework for understanding how embodied practices transmit social values, identities, and cultural history throughout Africa and the diaspora.

Countering the Problem of Falsified and Substandard Drugs - Institute of Medicine 2013-06-20

The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property concerns. Countering the Problem of Falsified and Substandard Drugs accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

Reason in Revolt - Alan Woods 2015-12-15

The achievements of science and technology during the past century are unparalleled in history. They provide the potential for the solution to all the problems faced by the planet, and equally for its total destruction. Allegedly scientific theories are being used to "prove" that criminality is caused, not by social conditions, but by a "criminal gene". Black people are alleged to be disadvantaged, not because of discrimination, but because of their genetic make-up. Of course, such "science" is highly convenient to right-wing politicians intent on ruthlessly cutting welfare. In the field of theoretical physics and cosmology there is a growing tendency towards mysticism. The "Big Bang" theory of the origin of the universe is being used to justify the existence of a Creator, as in the book of Genesis. For the first time in centuries, science appears to lend credence to religious obscurantism. Yet this is only one side of the story.

The Creation of Tribalism in Southern Africa - Leroy Vail 1991-01-07

Despite a quarter century of "nation building," most African states are still driven by ethnic particularism—commonly known as "tribalism." The stubborn persistence of tribal ideologies despite the profound changes associated with modernization has puzzled scholars and African leaders alike. The bloody hostilities between the tribally-oriented Zulu Inkhata movement and supporters of the African National Congress are but the most recent example of tribalism's tenacity. The studies in this volume offer a new historical model for the growth and endurance of such ideologies in southern Africa.
