Future Spacecraft Propulsion Systems and Integration - Paul A. Czysz 2017-08-30

The updated and expanded third edition of this book focuses on the multi-disciplinary coupling between flight-vehicle hardware alternatives and enabling propulsion systems. It discusses how to match near-term and far-term aerospace vehicles to missions and provides a comprehensive overview of the subject, directly contributing to the next-generation space infrastructure, from space tourism to space exploration. This holistic treatment defines a mission portfolio addressing near-term to long-term space transportation needs covering sub-orbital, orbital and escape flight profiles. In this context, a vehicle configuration classification is introduced covering alternatives starting from

the dawn of space access. A best-practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission. This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike.

Automotive Emissions Regulations and Exhaust Aftertreatment Systems - John Kasab 2020-08-31

The objective of this book is to present a fundamental development of the science and engineering underlying the design of exhaust aftertreatment systems for automotive internal combustion engines. No pre-requisite knowledge of the field is required: our objective is to acquaint the reader, whom we expect to be new to the field of emissions control, with the underlying principles, control methods, common problems, and fuel effects on catalytic exhaust aftertreatment devices. We do this in hope that they can better understand the previous and

current generations of emissions control, and improve upon them. This book is designed for the engineer, researcher, designer, student, or any combination of those, who is concerned with the control of automotive exhaust emissions. It includes discussion of theory and fundamentals applicable to hardware development.

Powering the U.S. Army of the Future - National Academies of Sciences Engineering and Medicine 2022-03-09

At the request of the Deputy Assistant Secretary

of the Army for Research and Technology, *Powering the U.S. Army of the Future* examines the U.S. Army's future power requirements for sustaining a multi-domain operational conflict and considers to what extent emerging power generation and transmission technologies can achieve the Army's operational power requirements in 2035. The study was based on one operational usage case identified by the Army as part of its ongoing efforts in multi-domain operations. The recommendations contained in this report are meant to help inform the Army's investment priorities in technologies to help ensure that the power requirements of the Army's future capability needs are achieved.

Automotive Control Systems - Uwe Kiencke
2005-04-13

Written by two of the most respected, experienced and well-known researchers and developers in the field (e.g., Kiencke worked at Bosch where he helped develop anti-breaking system and engine control; Nielsen has lead joint research projects with Scania AB, Mecel AB, Saab Automobile AB, Volvo AB, Fiat GM

Powertrain AB, and DaimlerChrysler. Reflecting the trend to optimization through integrative approaches for engine, driveline and vehicle control, this valuable book enables control engineers to understand engine and vehicle models necessary for controller design and also introduces mechanical engineers to vehicle-specific signal processing and automatic control. Emphasis on measurement, comparisons between performance and modelling, and realistic examples derive from the authors' unique industrial experience. The second edition offers new or expanded topics such as diesel-engine modelling, diagnosis and anti-jerking control, and vehicle modelling and parameter estimation. With only a few exceptions, the approaches

Diesel Engine Reference Book - Bernard Challen
1999

The Diesel Engine Reference Book, Second Edition, is a comprehensive work covering the design and application of diesel engines of all sizes. The first edition was published in 1984 and since that time the diesel engine has made significant advances in application areas from passenger cars and light trucks through to large marine vessels. The Diesel Engine Reference Book systematically covers all aspects of diesel engineering, from thermodynamics theory and modelling to condition monitoring of engines in service. It ranges through subjects of long-term use and application to engine designers, developers and users of the most ubiquitous mechanical power source in the world. The latest edition leaves few of the original chapters untouched. The technical changes of the past 20 years have been enormous and this is reflected in the book. The essentials however, remain the same and the clarity of the original remains.

Contributors to this well-respected work include some of the most prominent and experienced engineers from the UK, Europe and the USA. Most types of diesel engines from most applications are represented, from the smallest air-cooled engines, through passenger car and trucks, to marine engines. The approach to the subject is essentially practical, and even in the most complex technological language remains straightforward, with mathematics used only where necessary and then in a clear fashion. The approach to the topics varies to suit the needs of different readers. Some areas are covered in both an overview and also in some detail. Many drawings, graphs and photographs illustrate the 30 chapters and a large easy to use index provides convenient access to any information the readers requires.

My Autobiography - A.P. McCoy 2011-10-20
The fully updated autobiography of Tony 'A.P.' McCoy, Grand National and BBC SPORTS PERSONALITY OF THE YEAR winner and unquestionably the greatest jump jockey ever. Tony 'A.P.' McCoy is without doubt the greatest and most successful jump jockey of all time. He has collected a record 16 consecutive jump-jockey titles to date, since 1992 he has ridden more than 3,000 winners, saying 'I never stop dreaming of the day I'll reach 4,000', and in 2002 he beat Sir Gordon Richards's record of

269 winners in a season by riding 289. In April 2010, A.P. achieved his lifelong ambition when he won the Grand National at Aintree on Don't Push It. It was his 15th attempt to win the race, a victory that captured the public's imagination and further enhanced a glittering career in which he had seemingly won all there was to win. It was the missing piece in the racing jigsaw for a champion jockey who had already had famous victories in the King George VI Chase, Champion Hurdle, Champion Chase and Cheltenham Gold Cup. This powerfully honest autobiography looks at life at the very top in National Hunt racing, and includes the highs and lows of A.P. winning his second Gold Cup, in 2012 on Synchronised, fifteen years after his

first, only to see the horse put down after a fall in that year's Grand National. These are the memoirs of a true champion, an icon of sport, whose astonishing achievements are unlikely to be surpassed. It is a great story of courage and modesty, pain and professional setbacks, strong family values and sporting triumphs, the good guy coming first - and staying there.
