**Accounting, Organizations, and Institutions** - Christopher S. Chapman 2009-08-13

Accounting has an ever-increasing significance in contemporary society. Indeed, some argue that its practices are fundamental to the development and functioning of modern capitalist societies. We can see accounting everywhere: in organizations where budgeting, investing, costing, and performance appraisal rely on accounting practices; in financial and other audits; in corporate scandals and financial reporting and regulation; in corporate governance, risk management, and accountability, and in the corresponding growth and influence of the accounting profession. Accounting, too, is an important part of the curriculum and research of business and management schools, the fastest growing sector in higher education. This growth is largely a phenomenon of the last 50 years or so. Prior to that, accounting was seen mainly as a mundane, technical, bookkeeping exercise (and some still share that naive view). The growth in accounting has demanded a corresponding engagement by scholars to examine and highlight the important behavioural, organizational, institutional, and social dimensions of accounting. Pioneering work by accounting researchers and social scientists more generally has persuasively demonstrated to a wider social science, professional, management, and policy audience how many aspects of life are indeed constituted, to an important extent, through the calculative practices of accounting. Anthony Hopwood, to whom this book is dedicated, has been a leading figure in this endeavour, which has effectively defined accounting as a distinctive field of research in the social sciences. The book brings together the work of leading international accounting academics and social scientists, and demonstrates the scope, vitality, and insights of contemporary scholarship in and on accounting and auditing.

**Managerial Accounting for Managers** - Eric W. Noreen 2011

*Digitization of the Management Accounting Function* - Oliver Holtkemper 2020-10-27

This book analyzes the impact of digitization on management accounting in five manufacturing companies. It is one of the first in-depth empirical studies on the intersection of management accounting and digitization. The study suggests that there are two archetypes of digitization of the management accounting function. The first archetype emphasizes top-down-driven changes that aim to enhance efficiency, such as conducting tasks with a higher degree of automation in a leaner structure with fewer resources. The second archetype is strongly driven and initiated by employees in the management accounting function (bottom-up). The focus is on improving the use of data by applying innovative analytics methods, integrating additional sources of data, and benefiting from new technologies like artificial intelligence. The results of the study also indicate that digitization of the management accounting function is mostly in line with the overall company strategy.

**Accounting Information Systems for Decision Making** - Daniela Mancini 2013-04-18

This book contains a collection of research papers on accounting information systems including their strategic role in decision processes, within and between companies. Accounting information systems are often considered the instrument by default for accounting automation. This book aims to sketch a clear picture of the current state of AIS research, including design, acceptance and reliance, value-added decision making, interorganizational links, and process improvements. The contributions in this volume emphasize that AIS has grown into a powerful strategic tool. The book provides evidence for this observation by examining a wide range of current issues ranging from theory development in AIS to practical applications of accounting information systems. In particular it focuses on themes of growing interest in the realm of XBRL and Financial Reporting, Management Information Systems, IT/IS Audit and IT/IS Compliance. The book will be of interest to financial and managerial accountants and IT/IS practitioners, including information

systems managers and consultants.

**Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations** - Oncioiu, Ionica 2020-07-24

Current modern companies, which are also the key factors of a global economy, are subject to increasing pressures to conduct their business in an environmentally responsible manner, due to social and

environmental problems. Improving long-term environmental performance can bring economic benefits to those companies that are innovative and environmentally sensitive, especially by integrating environmental information into their business strategies. Considering all the changes, sustainability reporting, management, and financial accounting becomes a powerful information tool for executives, managers, and employee teams to gain insights and make better decisions. Along with concepts such as ethical, controlling, auditing, management, and financial accounting, reporting provides value with the decision-making process. All these debates underline the major responsibility of users when configuring accounting and finance models and thereby in modelling business information. Sustainability Reporting, Ethics, and Strategic Management Strategies for Modern Organizations proposes an interdisciplinary perspective and explores various theoretical and practical approaches of ethical standards, management accounting, and their impact in the 21st century on different areas of activity. It contrasts external financial accounting for government regulators and the investment community with internal management accounting for managers to leverage for decision making. In addition, the book examines the role of management accounting and sustainability reporting from other points of view such as ethical standards, corporate social responsibility, creative accounting, green accounting, environmental indicators, e-accounting, KPI, lean accounting, controlling, auditing, reporting, etc., offering a number of new insights into management accounting. **Management Scholarship and Organisational Change** - Miriam Green 2019-01-08

Change is a crucial and inescapable process for many organisations. It remains a constant challenge for managers and many change management initiatives fail. Burns and Stalker's seminal text on managing change, The Management of Innovation, has often been used as a basis for research in mainstream management journals and has been represented as an important theory in popular and long-established management textbooks. The issues raised in that book are still being grappled with by academics and practitioners today. Miriam Green provides a critical analysis of the mainstream construction of knowledge on change management through an examination of representations of that text. The main thesis of her book is that this literature, though valuable, does not provide a full picture. Its objectivist approach ignores the role of other factors raised in the original study. These factors include the effects of power, politics, resistance and employee influence on the outcomes of managerial change strategies and on other organisational processes, with important consequences for the understanding of change initiatives by both

academics and practitioners. This is part of an ongoing debate in management studies and more widely in the social sciences about theoretical approaches and research methods. The originality of this book lies in its in-depth comparison of an entire monograph on organisations facing technological and commercial change, with an equally in-depth analysis of the ways this work has been represented and used as a basis for teaching and research. It highlights the limitations of the exclusive use of one approach to explain the complications arising from organisational change. It challenges the scientific justification offered for that approach and supports arguments for more inclusive and sustainable scholarship, of greater relevance to academics, managers and other organisational stakeholders.
