Nutrition in Britain - David Smith 2013-06-17

This volume brings together for the first time a collection of essays, based on original research, which focus on the history of nutrition science in Britain. Each chapter considers a different episode in the development and application of nutritional knowledge during the twentieth century. The topics covered include: the chewing cult of Horace Fletcher, dietetic education, the popularization of milk, the Dunn Nutritional Laboratory, and wartime involvement in policy making. The selection of essays in Nutrition in Britain provide valuable new insights into the social processes involved in the production and application of scientific knowledge of nutrition. This book will be fascinating reading to historians of science or medicine, as well as to medical sociologists, nutritionists, home economists, health educators, food activists and anyone with a professional or general interest in food and nutrition.

A Solar Manifesto - Hermann Scheer 2021-12-17

In the decade since the 'Earth Summit' in Rio de Janeiro, the response of the world's governments and authorities to the threats to the global environment has been to enforce the reduction of energy consumption and harmful emissions - solutions primarily based around conventional energy resources and conventional thinking. The question is, though, whether this strategy is radical enough to address the key challenges how facing the environment, and whether it can be effective in avoiding catastrophe on a global scale. For Herman Scheer, the answer is a definite no. In this fully updated edition of A Solar Manifesto, he once more attacks the lack of political will to find answers outside a conventional frame of reference. Climate change, pollution, deforestation, destruction of the ozone layer, poverty and the population explosion are all problems created or exacerbated by the use of conventional energy. Seven years after the first edition of this book, answers are now more urgently required than ever, as current policies serve merely to alleviate the escalating symptoms rather than attempting a cure for what could become a terminal affliction. Herman Scheer shows that this crisis may yet be reversed - but it can only be made to

happen through a fundamental change in political and economic strategies, paving the way towards a global solar energy economy sustained by new social principles. A Solar Manifesto champions the replacement of fossil and nuclear fuels with solar energy, as a real solution to the threat to the environment and associated social consequences. Scheer constructs a radical yet innovative political and economic model and argues the case with passion and conviction for the global solar economy as the route to a sustainable environment. Thought-provoking and profoundly challenging, this book will be an inspiration to anyone concerned with energy and the global environment.

The Economics of John Kenneth Galbraith - Stephen P. Dunn 2010-11-11

The recent financial crisis has once again seen John Kenneth Galbraith return to the bestseller lists. Yet, despite the continued popular success of his works, Galbraith's contribution to economic theory is rarely recognized by today's economists. This book redresses the balance by providing an introductory and sympathetic discussion of Galbraith's theoretical contributions, introducing the reader to his economics and his broader vision of the economic process. The book highlights and explains key features of Galbraith's economic thought, including his penetrating critique of society, his distinctive methodology, his specific brand of Keynesianism and his original - but largely ignored - contribution to the theory of the firm. It also presents, for the first time, a detailed examination of Galbraith's monetary economics and revisits his analysis of financial euphoria. This unique work seeks to rehabilitate Galbraith's contribution, setting out several directions for possible future research in the Galbraithian tradition.
