**Bioenergy from Wood** - Thomas Seifert  
2013-12-02

This book is written for scientists and practitioners interested in deepening their knowledge of the sustainable production of bioenergy from wood in tropical and sub-tropical countries. Utilising the value chain concept, this book outlines the necessary aspects for

managing sustainable bioenergy production. A wide range of topics is covered including biomass localization, modelling and upscaling, production management in woodlands and plantations, and transport and logistics. Biomass quality and conversion pathways are examined in order to match the conversion technology with the available biomass. A section is dedicated to issues surrounding sustainability. The issues, covered in a life-cycle assessment of the bioenergy system, include socio-economic challenges, local effects on water, biodiversity, nutrient-sustainability and global impacts. Through this holistic approach and supporting examples from tropical and sub-tropical countries, the reader is guided in designing and implementing a value chain as the main management instrument for sustainable wood.

**The Mathematics Education for the Future Project. Proceedings of the 13th International Conference Mathematics Education in a Connected World** - Alan

Rogerson 2015-07-01

This volume contains the papers presented at the International Conference on Mathematics Education in a Connected World held from September 16-21, 2015 in Catania, Italy. The Conference was organized by The Mathematics Education for the Future Project - an international educational project founded in 1986.
