Microeconomics - John P. Burkett 2006-04-20

In this book, John P. Burkett presents microeconomics as an evolving science, interacting with mathematics, psychology, and other disciplines and offering solutions to a growing range of practical problems. The book shows how early contributors such as Xenophon, Ibn Khaldun, and David Hume posed the normative and positive questions central to microeconomics. It expounds constrained optimization techniques, as developed by economists and mathematicians from Daniel Bernoulli to Leonid Kantorovich, emphasizing their value in deriving norms of rational behavior and testable hypotheses about typical behavior. Applying these techniques, the book introduces partial equilibrium analysis of particular markets and general equilibrium analysis of market economies. The book both explains how laboratory and field experiments are used in testing economic hypotheses and provides materials for classroom experiments. It gives extensive and innovative coverage of recent findings in cognitive psychology and behavioral economics, which not only document behavior inconsistent with some traditional theories,

but also advance positive theories with superior predictive power.

The Dollarization Debate - Dominick Salvatore 2003-03-27

This book takes a global approach, with an emphasis on North and Latin America respectfully, by discussing one of today's most controversial topics in business; Dollarization. With the collapse of the former Soviet Union, and the formation of the Euro in Europe, many countries are debating whether or not a common currency is in their best interest. This intriguing volume brings together the leading participants in the current dollarization debates. Many advocate the notion of a common currency, while others feel that in doing so will create financial costs for all that take part, with the severity varying from country to country.

Protectionism and World Welfare - Dominick Salvatore 1993-09-23

This volume addresses highly topical issues at a crucial time in international economic relations. The world has never been closer to dismantling the liberal multilateral trading system which has been painstakingly established and successfully operated since the Second World War. In this volume many of the world's most distinguished economists examine the movement toward protectionism, bilateralism, and regionalism, and its causes, effects, and possible solutions. The contributors are theorists, researchers, and advisors to governments and international organizations who are at the forefront of trade theory, policy, and practice, and whose analyses have a real impact on international trade. By collecting together these analyses in a single volume, this book provides a unique survey for students and scholars of economics, and all those concerned with trade theory and policy in business and government.
