Container Logistics and Maritime Transport - Dong-Ping Song
2021-05-05

This book provides a coherent and systematic view of the key concepts, principles, and techniques in maritime container transport and logistics chains including all the main segments: international maritime trade and logistics, freight logistics, container logistics, vessel logistics, port and terminal management, and sustainability issues in maritime transport. Container Logistics and Maritime Transport emphasizes analytical methods and current optimization models to tackle challenging issues in maritime transport and logistics. This book takes a holistic approach to cover all the main segments of the container shipping supply chains to achieve an efficient and effective logistics service system across the entire global transport chain. Sustainability issues such as social concern and carbon emissions from shipping and ports are also discussed. Each maritime transport segment is addressed using an approach from qualitative/descriptive analytics to quantitative/prescriptive analytics. Cutting-edge optimization models are presented and explained to tackle various strategic, tactical, and operational planning problems. The book will help readers better understand operations management in global maritime container transport chain. It will also provide practical principles and effective techniques and tools for researchers to push forward the frontiers of knowledge and for practitioners to implement decision support systems. It will be directly relevant to academic courses related to maritime transport, maritime logistics, transport management,

international shipping, port management, container shipping, container logistics, shipping supply chain, and international logistics.

In this comprehensive book, John Manners-Bell provides an in-depth definition, description and exploration of: freight forwarding, contract logistics, shipping, road freight, air cargo and express. The book also examines major sectors, including Automotive, Chemical, Pharmaceutical, Retail, Consumer, and High Tech. Global Logistics Strategies offers a detailed examination of key topics, including: how the logistics industry has developed, how it is influenced by macro-economic factors and demand-side trends, what the risks are to the industry, and how it will develop over the coming years. It examines important trends and developments that are shaping the industry, including 3D printing, megacities, and post-harvest food losses. Includes online resources, including chapter summaries and figures.

Logistics Transportation Systems - MD Sarder 2020-10-17

Logistics Transportation Systems compiles multiple topics on transportation logistics systems from both qualitative and quantitative perspectives, providing detailed examples of real-world logistics workflows. It explores the key concepts and problem-solving techniques required by researchers and logistics professionals to effectively manage the continued expansion of logistics transportation systems, which is expected to reach an estimated 25 billion tons in the United States alone by 2045. This book provides an ample understanding of logistics

transportation systems, including basic concepts, in-depth modeling analysis, and network analysis for researchers and practitioners. In addition, it covers policy issues related to transportation logistics, such as security, rules and regulations, and emerging issues including reshoring. This book is an ideal guide for academic researchers and both undergraduate and graduate students in transportation modeling, supply chains, planning, and systems. It is also useful to transportation practitioners involved in planning, feasibility studies, consultation and policy for transportation systems, logistics, and infrastructure. Provides real-world examples of logistics systems solutions for multiple transportation modes, including seaports, rail, barge, road, pipelines, and airports Covers a wide range of business aspects, including customer service, cost, and decision analysis Features key-term definitions, concept overviews, discussions, and analytical problem-solving

Global Logistics - Donald Waters 2014-09-03

The field of logistics continues to develop at a remarkable pace. Until recently, logistics was barely considered in long-term plans, but its strategic role is now recognised and lies at the heart of long-term plans in almost every business. Reasons for this change include: communications and information technology offer new opportunities; world trade grows; competition forces operations to adopt new practices and become evermore efficient; and the concern for the environment increases. Add to this the increased emphasis on consumer satisfaction, flexible operations and time compression, and it's clear that getting logistics right is important. This 7th edition of Global Logistics, edited by Stephen Rinsler and Donald Waters, has been thoroughly revised and updated to reflect the latest trends, best practices, and cutting-edge thinking on global logistics. It provides guidance on important topics, including agile supply chains, IT, sustainability and performance management, collaboration, outsourcing and humanitarian logistics. This edition of Global Logistics provides new chapters on supply chain trends and strategies, fulfilling customer needs, and supply chain vulnerability. There are also dedicated new chapters on China and Central and Eastern Europe to assess developments across the globe. This edition serves as a

forum for acknowledged sector specialists to discuss key logistics issues and share their authoritative views. The new edition introduces new contributors, including leading thinkers from international universities and businesses. Global Logistics is an invaluable source of guidance and practical advice for students, managers and practitioners, who will find it an essential text that also includes online resources. Online resources available include a student manual with key learning outcomes for each chapter.

Freight Transport and the Modern Economy - Michel Savy
2013-06-26

Freight Transport and the Modern Economy adapts a well-known textbook by Michel Savy, revising, extending and updating it for British, European and international readers. It deals not only with the technical aspects of transport, logistics and supply chain management, but also the interactions between transport professionals and the public authorities in the modern social, political, economic and environmental context. The transport of freight is presented as a system, mixing empirics and theory, showing how transport itself functions and also its strong influence on the modern economy, with a growing volume of production, turnover and employment. The nature of freight transport, an industrial process widely marketed as a service, is analysed in depth, explaining the main characteristics of the transport operation, its market and the regulatory context. The main actors, the professional actors (carriers, shippers and other agents) and the public authorities are introduced, and their behaviour and interactions are clarified. This comprehensive approach allows the reader to go further and consider in particular the approaches and practices of transport by carriers, customers, logistics managers, political decision makers and citizens, to tackle long range issues such as the 'decoupling' of production and transport recommended by some institutions and experts, and to explore the need for more infrastructure, or the capacity of the freight transport industry to reduce its contribution to pollution and climate change. This book treats freight transport as a whole system in its technical, economic, social, political and environmental context, in contrast to existing transport literature

focused on individual aspects, such as transportation planning (usually for cars or passengers), logistics (essentially management issues), or individual transport modes. This book is comprehensive in its treatment of freight transport and in its use of multiple disciplinary perspectives.

Cross-Chain Collaboration in Logistics - Frans Cruijssen 2020-09-23

This book examines cross-chain control centers (4C), an ambitious concept in supply chain management and logistics that is intended to foster collaboration between different supply chains to increase efficiency. It provides an overview of the main results, insights, and other developments in the academic field of horizontal collaboration.

Furthermore, it gives recommendations to governments, commercial companies, and academia on how to proceed with horizontal logistics collaboration in the years to come. To link research with practice, the book takes the Dutch project on cross-chain collaboration centers (4Cs) and identifies a typology of existing patterns for horizontal collaboration in supply chains. Finally, the book zooms in on the Netherlands as a case-study of intense public-private partnerships to develop 4C as a mature logistics value proposition. It provides an overview of the accomplishments in the government supported 4C projects and offers a critical reflection of why some more ambitious and structural solutions have not found solid ground yet. The book is of value to researchers and professionals in the supply chain domain.

Logistics and Supply Chains in Emerging Markets - John Manners-Bell 2014-09-03

Emerging Markets hold the key to the development of the global logistics industry over the next twenty years. Whilst developed economies struggle to come to terms with huge levels of debt, newly industrialized markets are showing strong growth prospects as manufacturers and investors look at low-cost production locations. Essential reading for anyone involved in emerging markets or global logistics, *Logistics and*

Supply Chains in Emerging Markets is the definitive guide to maximising opportunities in emerging markets. This book explores the inherent challenges for global logistics providers when investing and operating in widely-dispersed and sometimes unstable emerging markets. Taking into account the social, economic, and political context, John Manners-Bell, Thomas Cullen, and Cathy Roberson guide you through the key considerations and provide a realistic evaluation of the infrastructures in place to support expansion in emerging markets. *Logistics and Supply Chains in Emerging Markets* analyses prospects for Asia, Latin America, Africa, Central Asia and the Middle East, including the potential of future logistics hotspots. There are dedicated sections on the BRIC transport and logistics sectors. Supported by a unique downloadable survey of 800 top executives, *Logistics and Supply Chains in Emerging Markets* gives you unrivalled access to top executives' evaluation of which emerging markets have the greatest potential to become future logistics hotspots, and how they integrate with global supply chains now and in the future.

Billionaires on Planet Earth: 1200 of the Most Influential Productive Capital Inspired Achievers - Joseph J. Randazzo

2019-11-23

"Billionaires are a unique fraternity and bread of humans that have excelled in the workforce more productive and creative than the successful entrepreneur, where timing in business supersedes talent and determination, persistence and sheer guts have shadowed and outreached college degrees." Currently, there are over 2300 billionaires on planet Earth and growing each and every year. These individuals think and act differently thus resulting in extreme capital collections

along with owning about 30% of the sports teams and massive collections of art, sacred writings, and toys. The category of women Billionaires seems to be growing fast in the USA, China, and Hong Kong, where most of the world's billionaires operate in the workforce. Although there may only be a handful of Super-Billionaires who amassed over \$50 Billion Dollars, the playing field is open in the future for many newcomers. What makes them different? What can we learn? Who's next? Study the habits of, "Billionaires On Planet Earth" from 120 of the most successful. They are thrifty and consider basic cost. They are continuing a constant quest for learning the latest information. They know the value of exercise and smart food to secure wellness. They understand the value of rest, meditation and prayer. They start their day early and have a plan ready for action. They see things differently and act on them. They don't understand, "No" as an answer. They are always possibility thinkers and then doers of action. They have learned, the more you give, the more you get in the realm of tithing, philanthropy and just old fashion basic giving back.

Moving Forward - Matías Herrera Dappe 2019-10-30

The erosion of its competitiveness is raising concerns about the sustainability of Bangladesh's growth model based on exports of ready-made garments. To safeguard its comparative advantage in ready-made garments and diversify its exports basket, Bangladesh needs to increase its competitiveness. Improving logistics performance is an important lever with which to do so. *Moving Forward: Connectivity and Logistics to Sustain Bangladesh's Success* presents a comprehensive assessment of logistics performance and its main determinants. It analyzes freight demand at a spatially disaggregated level, quantifies logistics costs, including the costs of externalities, looks at the factors that determine the stock and quality of infrastructure, and examines the incentives to provide logistics services of a certain type and quality and to charge the observed prices. It also quantifies the potential impacts of removing transport and logistics inefficiencies on Bangladesh's exports and economic geography using a spatial general equilibrium model. Bangladesh's congested, unreliable, and unsophisticated logistics system imposes high costs on the economy. Making it efficient requires a holistic system-wide approach that is based on a comprehensive strategy; improves the quality, capacity, and management of infrastructure; improves the quality and integration of logistics services; and achieves seamless regional connectivity. *Moving Forward* will be of interest to policy makers, private sector practitioners, and academics with an interest in the performance of Bangladesh's transport and logistics sectors.
