[Imperfect Competition and Sticky Prices](#) - N. Gregory Mankiw 1991

These two volumes bring together a set of important essays that represent a "newKeynesian" perspective in economics today. This recent

work shows how the Keynesian approach toeconomic fluctuations can be supported by rigorous microeconomic models of economic behavior. Theessays are grouped in seven parts that cover costly price adjustment, staggering of

wages and prices, imperfect competition, coordination failures, and the markets for labor, credit, and goods. An overall introduction, brief introductions to each of the parts, and a bibliography of additional papers in the field round out this valuable collection. Volume 1 focuses on how friction in price setting at the microeconomic level leads to nominal rigidity at the macroeconomic level, and on the macroeconomic consequences of imperfect competition, including aggregate demand externalities and multipliers. Volume 2 addresses recent research on non-Walrasian features of the labor, credit, and goods markets. N. Gregory Mankiw is Professor of Economics at Harvard University. Macroeconomics - N. Gregory Mankiw 2012-06-01

Long the bestseller for the intermediate macroeconomics course, Greg Mankiw's superbly crafted textbook maintains its authority, currency, and vitality edition after edition, and the new Eighth Edition is the most accomplished yet. Again, Mankiw provides an exceptionally clear and concise introduction to the macroeconomy, taking full

account of the 2007-2009 financial crisis and the measures taken in response to it. In addition to a new chapter directly inspired by the crisis (Chapter 20, The Financial System: Opportunities and Dangers) the new edition also features new research, discussions, and case studies throughout, as well as the most extensive media/supplements package available for any intermediate macroeconomics. You are welcome to use the new Financial System: Opportunities and Dangers chapter this semester with students. We will keep it posted through early June to allow free access for all who wish to have students read it. *Macroeconomics* - N. Gregory Mankiw 2018

Calculus: Early Transcendentals - Jon Rogawski 2018-12-28

We see teaching mathematics as a form of story-telling, both when we present in a classroom and when we write materials for exploration and learning. The goal is to explain

to you in a captivating manner, at the right pace, and in as clear a way as possible, how mathematics works and what it can do for you. We find mathematics to be intriguing and immensely beautiful. We want you to feel that way, too.

How to College - Andrea Malkin Brenner 2019-04-23
The first practical guide of its kind that helps students transition smoothly from high school to college The transition from high school—and home—to college can be stressful. Students and parents often arrive on campus unprepared for what college is really like. Academic standards and expectations are different from high school; families aren't present to serve as "scaffolding" for students; and first-years have to do what they call "adulting." Nothing in the college admissions process prepares students for these new realities. As a result, first-year college students report higher stress, more mental health issues, and lower completion rates than in the past. In fact, up to one third of

first-year college students will not return for their second year—and colleges are reporting an increase in underprepared first-year students. How to College is here to help. Professors Andrea Malkin Brenner and Lara Schwartz guide first-year students and their families through the transition process, during the summer after high school graduation and throughout the school year, preparing students to succeed and thrive as they transition and adapt to college. The book draws on the authors' experience teaching, writing curricula, and designing programs for thousands of first-year college students over decades.

Principles of Macroeconomics - Robin Stonecash 2020-10-15
Principles of Macroeconomics 8th edition boils economics down to its essentials, by considering what is truly important for students to learn in their first course in economics. In keeping with the authors' philosophy of showing students the power of

economic tools and the importance of economic ideas, this edition pays careful attention to regional and global policies and economic issues - including the impacts of the contemporary macroeconomic issues, inflation, unemployment, interest rates, and monetary and fiscal policy. The resource emphasises the material that students should and do find interesting about the study of the economy, resulting in a focus on applications and policy, and less on formal economic theory. Principles of Macroeconomics, 8th edition encourages students to make their own judgements by presenting both sides of the debate on five controversial issues facing policy makers: the proper degree of policy activism in response to the business cycle, the choice between rules and discretion in the conduct of monetary policy, the desirability of reaching zero inflation, the importance of balancing the government's budget, and the need for tax reform to encourage saving.
