EBOOK: Managing Strategy - David Watson
2000-03-16

Higher education institutions are under increasing pressure to produce corporate and strategic plans, both for external audiences (such as funding bodies and other 'partners') and for the internal purposes of setting and achieving goals. They are significantly dependent upon public investment and the expectations of public bodies as well as upon a fast-changing market for their products and

services. David Watson sets out what strategic management can and should consist of in a modern, essentially democratic, university or college, and how to make it work. He examines for instance: * how universities and colleges should go about satisfying legitimate external and internal requirements for their corporate plans. * how they should maximize their strategic assets and opportunities and minimize their weaknesses and threats. * the role of governance and management in setting and achieving a strategic plan. This book demonstrates how the academy has to adapt to meet the needs of its rapidly changing host society as well as of a more diverse and plural internal community, whilst maintaining a range of historical commitments. The result is an account of strategic management that is simultaneously careful of traditional values, restorative of those that have fallen into abeyance, and genuinely innovative.

Educating for Values-Driven Leadership - Mary C. Gentile 2013-08-29

Despite four decades of good faith effort to teach ethics in business schools, you'll still find today headlines about egregious excess and scandal. It becomes reasonable to ask why these efforts have not been working. Business faculty in ethics courses spend a lot of time teaching theories of ethical reasoning and analyzing those big, thorny dilemmas—triggering what one professor called “ethics fatigue.” But what if faculty stopped focusing on ethical analysis and focused on a new curriculum—one that builds a conversation across the core curriculum (not only in ethics courses) and also provides the teaching aids for a new way of thinking about ethics education? This is where Giving Voice to Values (GVV) comes in—the GVV curriculum asks the question: “What if I were going to act on my values? What would I say and do? How could I be most effective?” This book will help faculty across the business curriculum with examples, strategies, and assistance in applying the GVV approach. In addition to an introductory chapter, which explains the rationale and strategy behind GVV, there are twelve individual chapters by faculty from the major business functional areas and from faculty representing different geographic regions. The book is a useful guide for faculty from any business discipline on HOW to use the GVV approach in his or her teaching.

A Practical Guide to Educating for Responsibility in Management and Business

- Ross McDonald 2013-08-10

What does it mean to “educate for responsibility”? The author of this book will teach you about the new way of engaging young people with the challenge of changing their world for the better. Designed for application in any educational context dealing with ethics, responsibility, or human development, this book explains in detail how to facilitate anyone's ability to think and act in more fully responsible ways. In contrast to the predominant model of teaching, which is almost exclusively an intellectual education about responsibility, educating for responsibility integrates emotion, insight, observation, and action so anyone can learn the true dynamics of exercising this resilient capacity. Inside, educating for responsibility is explained and a template offered for a creative way of teaching that has proven to be extremely effective in practice. Written particularly for those offering courses or training in social responsibility, sustainability, or business ethics, it offers a new way of thinking

about how we might better serve the interests of a generation of young people entering a rapidly changing, and by all accounts, rapidly destabilizing world.

Teaching for Quality Learning at University 5e - John Biggs 2022-11-10

“Biggs and Tang, now with Kennedy, have ensured this new edition remains an international leader for university teaching for the next decade.” Denise Chalmers AM, Emeritus Professor, University of Western Australia, Australia “This book, a fifth edition, can truly be called a “classic” on the topic of teaching, learning and curriculum design in higher education.” Michael Prosser, Honorary Professorial Fellow, Centre for the Study of Higher Education, University of Melbourne, Australia “You should be inspired to increase the quality of your teaching, your learning, and your learning about teaching.” John R. Kirby, Professor Emeritus of Educational Psychology, Queen's University, Canada The concept of constructive alignment has supported generations of students and teachers within higher education. It is a ‘backward design’ method of teaching where the student outcomes are identified first and the teacher then designs teaching activities to enable students to achieve those outcomes, assessing how well they have been achieved. Each chapter outlines how to design the learning outcomes, teaching and assessments for success in learning. This updated edition of *Teaching for Quality Learning at University*: • Provides a comprehensive, research-based theory of teaching for teacher reflection • Outlines how educational technology can be used in constructively aligned teaching • Helps staff developers to provide support for staff and departments in line with institutional policies • Offers a framework for quality assurance and quality enhancement across a whole institution *Teaching for Quality Learning at University* continues to be used as a framework for designing higher education teaching systems globally and is essential reading for those in the field. John Biggs has held Chairs in Education in Canada, Australia, and Hong Kong. He has published extensively on student learning and the implications of his research for teaching. He developed his concept of constructive alignment at the University of

Hong Kong, first outlined in Teaching for Quality Learning at University in 1999. Catherine Tang has over 15 years of teaching experience in tertiary education and is the former Head of the Centre for Learning, Teaching and Supervision at the Education University of Hong Kong (the then Hong Kong Institute of Education) and the Educational Development Centre at the Hong Kong Polytechnic University. Gregor Kennedy is the Deputy Vice-Chancellor (Academic) at the University of Melbourne, Australia and a Professor of Higher Education in the Melbourne Centre for the Study of Higher Education.

EBOOK: Healthcare Management - Kieran Walshe 2017-10-27

This popular book is written by leading experts in the field and covers all the key aspects of healthcare management. Written with healthcare managers, professionals and students in mind, it provides an accessible and evidence-based guide to healthcare systems, services, organizations and management. Key areas covered include:

- Structure and delivery of healthcare services in the international context, including mental health, acute care, primary care, chronic disease and integrated care
- Allocating resources for healthcare: setting and managing priorities
- Health technologies, research and innovation
- Global health policy: governing health systems across borders
- Patient and public involvement in healthcare
- Healthcare governance and performance

This third edition has been significantly rewritten, with 10 new contributors and a new chapter structure designed to better support learning, practical application and further study. In addition, there is a more international focus and each chapter includes new case studies giving global examples of health systems and services, new and updated learning activities to encourage application to your own organization, and a range of links to useful online resources. Healthcare Management is essential research-based reading for students, teachers and healthcare professionals involved in management, research and health policy making. "Walshe and Smith have assembled an invaluable introduction to healthcare management and health systems. With their fellow authors, they provide a comprehensive review of a range of issues related to the funding

and provision of care, and how services are organised and managed. Now in its third edition, Healthcare Management has been updated and revised to meet the needs of teachers and students alike." Professor Chris Ham, Chief Executive, The King's Fund, UK "This book covers the main areas of knowledge which managers need, and gives tools for thinking and empirical examples relevant to current challenges. Evidence based management might not always be possible, but this book gives a way for a manager to become research-informed and therefore more effective. This third edition of the book is even more relevant internationally and improved to help readers apply the ideas to their situation." Professor John Øvretveit, Director of Research, LIME/MMC, The Karolinska Institute, Sweden "No-one learns to be a manager in a classroom or from a book, but books that take this disclaimer as their starting point are indispensable. Walshe and Smith (and their fellow authors) invite their audience (healthcare managers, healthcare policy makers and postgraduate students, taking courses in healthcare management) to critically combine experiential learning with academic learning and to acquire knowledge from both practice and theory. By doing so, they have found the third way between the advocates of evidence-based management and their criticasters." Dr. Jan-Kees Helderma, Associate Professor in Public Administration, Institute for Management Research, Radboud University, Nijmegen, the Netherlands

Academic Ethos Management -

Agata Stachowicz-Stanusch 2012-12-04

This topical and much needed book constitutes an important part of the debate on the integrity in an academic context as a sine qua non of responsible management education. Like you, we've all been listening to the highly publicized corporate scandals and instances of management misconduct that have eroded public faith. Simultaneously, management scholars and educators have begun to question the assumptions underlying the traditional management education, which in their view not only contributed to a recent moral crisis but has also failed to prepare students and executives for coping with the responsible leadership challenges and ethical dilemmas that face

managers in contemporary corporations. This book discusses, with stimulating examples, how universities should bring alive their core values. Using case studies and examples from universities from all over the world, you'll learn real practical advice and guidance, which explain in detail how you and other administrators and educators should discover, articulate, and institutionalize (implementation, securing and controlling by creating adequate policies, procedures process, etc.) university core values into academic daily activities and create a foundation for academy integrity.

Responsible Management - Kemi Ogunyemi 2013-01-15

Does a manager in today's world need to know anything about freedom? Or about intrinsic goods? Or even about educating emotions? "Absolutely," says author Kemi Ogunyemi. Kemi wrote this book to serve as a valuable tool to complement courses on ethics, responsibility, leadership, human behavior in organizations, customer service, and sustainability—most of which tend to ignore their human nature dimensions. Inside, you'll be provided an indepth understanding of human nature and its uniqueness and complexity, which can greatly enhance your managerial skills for achieving

business success in today's world. You will be empowered to better manage yourself, others, and the environment. This book also provides a foundation for developing ethical sensitivity and corporate social responsibility. There is a clear and present danger that managers may tend to focus primarily on financial success in different key dimensions—operational quality, financial strategy, workforce motivation, cost-cutting strategies, etc.—and perhaps discover too late the neglect of an even more vital dimension of all human endeavor. Future leaders and shapers of sustainable organizations and societies cannot afford to have such a knowledge gap.
