Theological Foundations - John J. Mueller 2007

Here, a team of award-winning teaching scholars has come together to create an introductory text that offers a truly unique and innovative contribution to the discipline of theological studies. This "first book" provides students of any religious tradition with the foundational skills, vocabulary, conceptual understanding, and research abilities that they need to succeed in theology and religious studies. Theological Foundations provides the following: Ten chapters that introduce the major sub-disciplines of theology creating a well-rounded source for understanding the discipline as a whole Contributions that are clear, accessible, and steeped in content A strong basis for vigorous intellectual and personal exploration of life and our relation to God Flexibility that allows the instructor to assign readings in any order that fits his or her syllabus A one-of-a-kind, integrated library research component, "From the Reference Librarian," which teaches students the foundational skills needed for successful study in theology and in any academic discipline
Gratitude - Oliver Sacks 2015-11-24

"My predominant feeling is one of gratitude. I have loved and been loved. I have been given much and I have given something in return. Above all, I have been a sentient being, a thinking animal, on this beautiful planet, and that in itself has been an enormous privilege and adventure."

—Oliver Sacks No writer has succeeded in capturing the medical and human drama of illness as honestly and as eloquently as Oliver Sacks. During the last few months of his life, he wrote a set of essays in which he movingly explored his feelings about completing a life and coming to terms with his own death. "It is the fate of every human being," Sacks writes, "to be a unique individual, to find his own path, to live his own life, to die his own death." Together, these four essays form an ode to the uniqueness of each human being and to gratitude for the gift of life.

"Oliver Sacks was like no other clinician, or writer. He was drawn to the homes of the sick, the institutions of the most frail and disabled, the company of the unusual and the 'abnormal.' He wanted to see humanity in its many variants and to do so in his own, almost anachronistic way—face to face, over time, away from our burgeoning apparatus of computers and algorithms. And, through his writing, he showed us what he saw." —Atul Gawande, author of *Being Mortal*

The Island of the Colour-blind - Oliver Sacks 2011-06-16

'Sacks is rightly renowned for his empathy . . . anyone with a taste for the exotic will find this beautifully written book highly engaging' - Sunday Times Always fascinated by islands, Oliver Sacks is drawn to the Pacific by reports of the tiny atoll of Pingelap, with its isolated community of islanders born totally colour-blind; and to Guam, where he investigates a puzzling paralysis endemic there for a century. Along the way, he re-encounters the beautiful, primitive island cycad trees - and these become the starting point for a meditation on time and evolution, disease and adaptation, and islands both real and metaphorical in *The Island of the Colour-Blind*.

On the Move - Oliver Sacks 2016-02-25

Physician and writer Oliver Sacks recounts his experiences as a young neurologist; his physical passions—weight lifting and swimming; his love affairs, both romantic and intellectual; his guilt over leaving his family to come to America; his bond with his schizophrenic brother; and the writers and scientists—Thom Gunn, A.R. Luria, W.H. Auden, Gerald M. Edelman, Francis Crick—who influenced him.

The Planets - Dava Sobel 2006-10-31

Dava Sobel's *The Glass Universe* will be available from Viking in December 2016 With her bestsellers *Longitude* and *Galileo's Daughter*, Dava Sobel introduced readers to her rare gift for weaving complex scientific concepts into a compelling narrative. Now Sobel brings her full talents to bear on what is perhaps her most ambitious topic to date—the

planets of our solar system. Sobel explores the origins and oddities of the planets through the lens of popular culture, from astrology, mythology, and science fiction to art, music, poetry, biography, and history. Written in her characteristically graceful prose, *The Planets* is a stunningly original celebration of our solar system and offers a distinctive view of our place in the universe. * A New York Times extended bestseller * A Featured Alternate of the Book-of-the-Month Club, History Book Club, Scientific American Book Club, and Natural Science Book Club * Includes 11 full-color illustrations by artist Lynette R. Cook "[*The Planets*] lets us fall in love with the heavens all over again." -The New York Times Book Review "Playful . . . lyrical . . . a guided tour so imaginative that we forget we're being educated as we're being entertained." -Newsweek "[Sobel] has outdone her extraordinary talent for keeping readers enthralled. . . . *Longitude* and *Galileo's Daughter* were exciting enough, but *The Planets* has a charm of its own A splendid and enticing book." -San Francisco Chronicle "A sublime journey. [Sobel's] writing . . . is as bright as the sun and its thinking as star-studded as the cosmos." -The Atlanta Journal-Constitution "An incantatory serenade to the Solar System. Grade A-" -Entertainment Weekly "Like Sobel's [*Longitude* and *Galileo's Daughter*] . . . [*The Planets*] combines masterful storytelling with clear, engaging explanations of the essential scientific facts." -Physics World

Uncle Tungsten - Oliver Sacks 2013-12-11

Long before Oliver Sacks became a distinguished neurologist and bestselling writer, he was a small English boy fascinated by metals—also by chemical reactions (the louder and smellier the better), photography, squids and cuttlefish, H.G. Wells, and the periodic table. In this endlessly charming and eloquent memoir, the author of *The Man Who Mistook His Wife for a Hat* and *Awakenings* chronicles his love affair with science and the magnificently odd and sometimes harrowing childhood in which that love affair unfolded. In *Uncle Tungsten* we meet Sacks' extraordinary family, from his surgeon mother (who introduces the fourteen-year-old Oliver to the art of human dissection) and his father, a family doctor who imbues in his son an early enthusiasm for housecalls, to his "Uncle Tungsten," whose factory produces tungsten-filament lightbulbs. We follow the young Oliver as he is exiled at the age of six to a grim, sadistic boarding school to escape the London Blitz, and later watch as he sets about passionately reliving the exploits of his chemical heroes—in his own home laboratory. *Uncle Tungsten* is a crystalline view of a brilliant young mind springing to life, a story of growing up which is by turns elegiac, comic, and wistful, full of the electrifying joy of discovery.

An Anthropologist on Mars - Oliver Sacks 2012-11-14

To these seven narratives of neurological disorder Dr. Sacks brings the same humanity, poetic observation, and infectious sense of wonder that are apparent in his bestsellers *Awakenings* and *The Man Who Mistook His Wife for a Hat*. These men, women, and one extraordinary child emerge as brilliantly adaptive personalities, whose conditions have not so much debilitated them as ushered them into another reality.

The Population Bomb - Paul R. Ehrlich 1971

The Man Who Mistook His Wife for a Hat - Oliver Sacks 2021-09-14

In his most extraordinary book, the bestselling author of *Awakenings* and "poet laureate of medicine" (The New York Times) recounts the case histories of patients inhabiting the compelling world of neurological disorders, from those who are no longer able to recognize common objects to those who gain extraordinary new skills. Featuring a new preface, Oliver Sacks's *The Man Who Mistook His Wife for a Hat* tells the stories of individuals afflicted with perceptual and intellectual disorders: patients who have lost their memories and with them the greater part of their pasts; who are no longer able to recognize people and common

objects; whose limbs seem alien to them; who lack some skills yet are gifted with uncanny artistic or mathematical talents. In Dr. Sacks's splendid and sympathetic telling, his patients are deeply human and his tales are studies of struggles against incredible adversity. A great healer, Sacks never loses sight of medicine's ultimate responsibility: "the suffering, afflicted, fighting human subject."

Awakenings - Oliver Sacks 2013-05-29

Awakenings--which inspired the major motion picture--is the remarkable story of a group of patients who contracted sleeping-sickness during the great epidemic just after World War I. Frozen for decades in a trance-like state, these men and women were given up as hopeless until 1969, when Dr. Oliver Sacks gave them the then-new drug L-DOPA, which had an astonishing, explosive, "awakening" effect. Dr. Sacks recounts the moving case histories of his patients, their lives, and the extraordinary transformations which went with their reintroduction to a changed world.

Seeing Voices - Oliver Sacks 2011-03-04

Like *The Man Who Mistook His Wife for a Hat*, this is a fascinating voyage into a strange and wonderful land, a provocative meditation on communication, biology, adaptation, and culture. In *Seeing Voices*, Oliver Sacks turns his attention to the subject of deafness, and the result is a deeply felt portrait of a minority struggling for recognition and respect—a minority with its own rich, sometimes astonishing, culture and unique visual language, an extraordinary mode of communication that tells us much about the basis of language in hearing people as well. *Seeing Voices* is, as Studs Terkel has written, "an exquisite, as well as revelatory, work."

Anthro-Vision - Gillian Tett 2021-06-08

While today's business world is dominated by technology and data analysis, award-winning financial journalist and anthropology PhD Gillian Tett advocates thinking like an anthropologist to better understand consumer behavior, markets, and organizations to address some of society's most urgent challenges. Amid severe digital disruption, economic upheaval, and political flux, how can we make sense of the world? Leaders today typically look for answers in economic models, Big Data, or artificial intelligence platforms. Gillian Tett points to anthropology—the study of human culture. Anthropologists learn to get inside the minds of other people, helping them not only to understand other cultures but also to appraise their own environment with fresh perspective as an insider-outsider, gaining lateral vision. Today, anthropologists are more likely to study Amazon warehouses than remote Amazon tribes; they have done research into institutions and companies such as General Motors, Nestlé, Intel, and more, shedding light on practical questions such as how internet users really define themselves; why corporate projects fail; why bank traders miscalculate losses; how companies sell products like pet food and pensions; why pandemic policies succeed (or not). Anthropology makes the familiar seem unfamiliar and vice versa, giving us badly needed three-dimensional perspective in a world where many executives are plagued by tunnel vision, especially in fields like finance and technology. "Fascinating and surprising" (Fareed Zararia, CNN), *Anthro-Vision* offers a revolutionary new way for understanding the behavior of organizations, individuals, and markets in today's ever-evolving world.

Migraine - Oliver Sacks 2013-05-29

The many manifestations of migraine can vary dramatically from one patient to another, even within the same patient at different times. Among the most compelling and perplexing of these symptoms are the strange visual hallucinations and distortions of space, time, and body image which migraineurs sometimes experience. Portrayals of these uncanny states have found their way into many works of art, from the heavenly visions of Hildegard von Bingen to *Alice in Wonderland*. Dr. Oliver Sacks argues that migraine cannot be understood simply as an illness, but must be viewed as a complex condition with a unique role to play in each individual's life.

House of Cards - Robyn Dawes 2009-11-24

Robin Dawes spares no one in this powerful critique of modern psychotherapeutic practice. As Dawes points out, we have all been swayed by the "pop psych" view of the world--believing, for example, that self-esteem is an essential precursor to being a productive human being, that events in one's childhood affect one's fate as an adult, and that "you have to love yourself before you can love another."

The Art of Being Human - Michael Wesch 2018-08-07

Anthropology is the study of all humans in all times in all places. But it is so much more than that. "Anthropology requires strength, valor, and courage," Nancy Scheper-Hughes noted. "Pierre Bourdieu called

anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. ... It teaches students not to be afraid of getting one's hands dirty, to get down in the dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a "heroic" profession." What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for instructors of cultural anthropology. This 2018 text is a revision of the "first draft edition" from 2017 and includes 7 new chapters.

Art d'Ecco - Andrew Langridge 2000-01-01

In the late 1980s, long before his work on the Eisner and Harvey-nominated *Fred the Clown*, Roger Langridge worked with his brother Andrew on a comic called *Art d'Ecco*. In these early stories, done mainly (but seldom entirely) for laughs, one can see the beginnings of the formal playfulness that would characterize the later work of both Langridge brothers, and of the elaborate layering of subtle and not-so-subtle nods and references to the world of music, film and literature. p.p1 {margin: 0.0px 0.0px 0.0px 0.0px; font: 13.9px Arial; color: #424242}

The Medical Detectives - Berton Roueche 1982-02-01

Mysteries of modern American medicine--involving strange allergies, food poisonings, environmental contaminations, and outbreaks of mass hysteria--are solved in engrossing and instructive narratives conducted by a renowned medical writer

Vintage Sacks - Oliver Sacks 2007-12-18

Vintage Readers are a perfect introduction to some of the great modern writers presented in attractive, accessible paperback editions. "It is Dr. Sacks's gift that he has found a way to enlarge our experience and understanding of what the human is." —The Wall Street Journal Dubbed "the poet laureate of medicine" by The New York Times, Oliver Sacks is a practicing neurologist and a mesmerizing storyteller. His empathetic accounts of his patients's lives—and wilyly observed narratives of his own—convey both the extreme borderlands of human experience and the miracles of ordinary seeing, speaking, hearing, thinking, and feeling. *Vintage Sacks* includes the introduction and case study "Rose R." from *Awakenings* (the book that inspired the Oscar-nominated movie), as well as "A Deaf World" from *Seeing Voices*; "The Visions of Hildegard" from *Migraine*; excerpts from "Island Hopping" and "Pingelap" from *The Island of the Colorblind*; "A Surgeon's Life" from *An Anthropologist on Mars*; and two chapters from Sacks's acclaimed memoir *Uncle Tungsten*.

Everything in Its Place - Oliver Sacks 2019-04-23

From the best-selling author of *Gratitude* and *On the Move*, a final volume of essays that showcase Sacks's broad range of interests--from his passion for ferns, swimming, and horsetails, to his final case histories exploring schizophrenia, dementia, and Alzheimer's. Oliver Sacks, scientist and storyteller, is beloved by readers for his neurological case histories and his fascination and familiarity with human behavior at its most unexpected and unfamiliar. *Everything in Its Place* is a celebration of Sacks's myriad interests, told with his characteristic compassion and erudition, and in his luminous prose.

The Mind's Eye - Oliver Sacks 2010-10-26

In *The Mind's Eye*, Oliver Sacks tells the stories of people who are able to navigate the world and communicate with others despite losing what many of us consider indispensable senses and abilities: the power of speech, the capacity to recognize faces, the sense of three-dimensional space, the ability to read, the sense of sight. For all of these people, the challenge is to adapt to a radically new way of being in the world. There is Lilian, a concert pianist who becomes unable to read music and is eventually unable even to recognize everyday objects, and Sue, a neurobiologist who has never seen in three dimensions, until she suddenly acquires stereoscopic vision in her fifties. There is Pat, who reinvents herself as a loving grandmother and active member of her community, despite the fact that she has aphasia and cannot utter a sentence, and Howard, a prolific novelist who must find a way to continue his life as a writer even after a stroke destroys his ability to read. And there is Dr. Sacks himself, who tells the story of his own eye cancer and the bizarre and disconcerting effects of losing vision to one side. Sacks explores some very strange paradoxes—people who can see perfectly well but cannot recognize their own children, and blind people

who become hyper-visual or who navigate by “tongue vision.” He also considers more fundamental questions: How do we see? How do we think? How important is internal imagery—or vision, for that matter? Why is it that, although writing is only five thousand years old, humans have a universal, seemingly innate, potential for reading? The Mind’s Eye is a testament to the complexity of vision and the brain and to the power of creativity and adaptation. And it provides a whole new perspective on the power of language and communication, as we try to imagine what it is to see with another person’s eyes, or another person’s mind.

An Anthropologist on Mars - Oliver W. Sacks 1996

Hallucinations - Oliver Sacks 2012-11-06

“Illuminate[s] the complexities of the human brain and the mysteries of the human mind.” —The New York Times To many people, hallucinations imply madness, but in fact they are a common part of the human experience. These sensory distortions range from the shimmering zigzags of a visual migraine to powerful visions brought on by fever, injuries, drugs, sensory deprivation, exhaustion, or even grief.

Hallucinations doubtless lie behind many mythological traditions, literary inventions, and religious epiphanies. Drawing on his own experiences, a wealth of clinical cases from among his patients, and famous historical examples ranging from Dostoevsky to Lewis Carroll, the legendary neurologist Oliver Sacks investigates the mystery of these sensory deceptions: what they say about the working of our brains, how they have influenced our folklore and culture, and why the potential for hallucination is present in us all.

An Anthropologist on Mars - Oliver Sacks 2014-01-27

Here are seven detailed and fascinating portraits of neurological patients, including a surgeon consumed by the compulsive tics of Tourette's syndrome unless he is operating; an artist who loses all sense of color in a car accident, but finds a new sensibility and creative power in black and white; and an autistic professor who cannot decipher the simplest social exchange between humans, but has built a career out of her intuitive understanding of animal behavior. Sacks combines the well honed mind of an academician with the verve of a true storyteller, and manages to produce a book at once accessible and challenging. The capacity to observe the patient as a different form of human being, instead of as just an 'interesting case', is a true insight into what Medicine should be; furthermore, as the author insistently teaches, neurological diseases differ from other ailments in that they become a true portion of the persona, and ,in a sense, they belong to the patient, whereas most people consider disease to be something that 'happens' to them, an outside influence not to be confused with the true Self. It is a truly accessible and moving book, and teaches us all something about the diversity and depths of the human kind.

The Oracle of Night - Sidarta Ribeiro 2021-08-17

A groundbreaking history of the human mind told through our experience of dreams—from the earliest accounts to current scientific findings—and their essential role in the formation of who we are and the world we have made. What is a dream? Why do we dream? How do our bodies and minds use them? These questions are the starting point for this unprecedented study of the role and significance of this phenomenon. An investigation on a grand scale, it encompasses literature, anthropology, religion, and science, articulating the essential place dreams occupy in human culture and how they functioned as the catalyst that compelled us to transform our earthly habitat into a human world. From the earliest cave paintings—where Sidarta Ribeiro locates a key to humankind’s first dreams and how they contributed to our capacity to perceive past and future and our ability to conceive of the existence of souls and spirits—to today’s cutting-edge scientific research, Ribeiro arrives at revolutionary conclusions about the role of dreams in human existence and evolution. He explores the advances that contemporary neuroscience, biochemistry, and psychology have made into the connections between sleep, dreams, and learning. He explains what dreams have taught us about the neural basis of memory and the transformation of memory in recall. And he makes clear that the earliest insight into dreams as oracular has been elucidated by contemporary research. Accessible, authoritative, and fascinating, *The Oracle of Night* gives us a wholly new way to understand this most basic of human experiences.

Imagination - Jim Davies 2019-11-05

We don’t think of imagination the way that we should. The word is often only associated with children, artists and daydreamers, but in reality, imagination is an integral part of almost every action and decision that we make. Simply put, imagination is a person’s ability to create scenarios

in his or her head: this can include everything from planning a grocery list, to honing a golf swing, to having religious hallucinations. And while imagination has positive connotations, it can also lead to decreased productivity and cooperation, or worse, the continuous reliving of past trauma. The human brain is remarkable in its ability to imagine—it can imagine complex possible futures, fantasy worlds, or tasty meals. We can use our imaginations to make us relaxed or anxious. We can imagine what the world might be, and construct elaborate plans. People have been fascinated with the machination of the human brain and its ability to imagine for centuries. There are books on creativity, dreams, memory, and the mind in general, but how exactly do we create those scenes in our head? With chapters ranging from hallucination and imaginary friends to how imagination can make you happier and more productive, Jim Davies' *Imagination* will help us explore the full potential of our own mind.

Working on Mars - William J. Clancey 2012-09-07

What it's like to explore Mars from Earth: How the Mars rovers provide scientists with a virtual experience of being on Mars. Geologists in the field climb hills and hang onto craggy outcrops; they put their fingers in sand and scratch, smell, and even taste rocks. Beginning in 2004, however, a team of geologists and other planetary scientists did field science in a dark room in Pasadena, exploring Mars from NASA's Jet Propulsion Laboratory (JPL) by means of the remotely operated Mars Exploration Rovers (MER). Clustered around monitors, living on Mars time, painstakingly plotting each movement of the rovers and their tools, sensors, and cameras, these scientists reported that they felt as if they were on Mars themselves, doing field science. The MER created a virtual experience of being on Mars. In this book, William Clancey examines how the MER has changed the nature of planetary field science. Drawing on his extensive observations of scientists in the field and at the JPL, Clancey investigates how the design of the rover mission enables field science on Mars, explaining how the scientists and rover engineers manipulate the vehicle and why the programmable tools and analytic instruments work so well for them. He shows how the scientists felt not as if they were issuing commands to a machine but rather as if they were working on the red planet, riding together in the rover on a voyage of discovery. The River of Consciousness - Oliver Sacks 2017-10-24

From the best-selling author of *Gratitude*, *On the Move*, and *Musicophilia*, a collection of essays that displays Oliver Sacks's passionate engagement with the most compelling and seminal ideas of human endeavor: evolution, creativity, memory, time, consciousness, and experience. Oliver Sacks, a scientist and a storyteller, is beloved by readers for the extraordinary neurological case histories (*Awakenings*, *An Anthropologist on Mars*) in which he introduced and explored many now familiar disorders--autism, Tourette's syndrome, face blindness, savant syndrome. He was also a memoirist who wrote with honesty and humor about the remarkable and strange encounters and experiences that shaped him (*Uncle Tungsten*, *On the Move*, *Gratitude*). Sacks, an Oxford-educated polymath, had a deep familiarity not only with literature and medicine but with botany, animal anatomy, chemistry, the history of science, philosophy, and psychology. *The River of Consciousness* is one of two books Sacks was working on up to his death, and it reveals his ability to make unexpected connections, his sheer joy in knowledge, and his unceasing, timeless project to understand what makes us human.

Surviving Survival: The Art and Science of Resilience - Laurence Gonzales 2012-09-10

Highlights the survivors of various traumas and describes their lives both before and after and offers a detailed discussion of the fear, courage and the flexibility of the spirit that drives people onward after a life-threatening experience.

Musicophilia - Oliver Sacks 2010-02-05

What goes on in human beings when they make or listen to music? What is it about music, what gives it such peculiar power over us, power delectable and beneficent for the most part, but also capable of uncontrollable and sometimes destructive force? Music has no concepts, it lacks images; it has no power of representation, it has no relation to the world. And yet it is evident in all of us—we tap our feet, we keep time, hum, sing, conduct music, mirror the melodic contours and feelings of what we hear in our movements and expressions. In this book, Oliver Sacks explores the power music wields over us—a power that sometimes we control and at other times don’t. He explores, in his inimitable fashion, how it can provide access to otherwise unreachable emotional

states, how it can revivify neurological avenues that have been frozen, evoke memories of earlier, lost events or states or bring those with neurological disorders back to a time when the world was much richer. This is a book that explores, like no other, the myriad dimensions of our experience of and with music.

And How Are You, Dr. Sacks? - Lawrence Weschler 2019-08-13

The untold story of Dr. Oliver Sacks, his own most singular patient "[An] engrossing biographical memoir. This is Sacks at full blast: on endless ward rounds, observing his post-encephalitic patients . . . exulting over horseshoe crabs and chunks of Iceland spar." —Barbara Kiser, *Nature*

The author Lawrence Weschler began spending time with Oliver Sacks in the early 1980s, when he set out to profile the neurologist for his own new employer, *The New Yorker*. Almost a decade earlier, Dr. Sacks had published his masterpiece *Awakenings*—the account of his long-dormant patients' miraculous but troubling return to life in a Bronx hospital ward. But the book had hardly been an immediate success, and the rumpled clinician was still largely unknown. Over the ensuing four years, the two men worked closely together until, for wracking personal reasons, Sacks asked Weschler to abandon the profile, a request to which Weschler acceded. The two remained close friends, however, across the next thirty years and then, just as Sacks was dying, he urged Weschler to take up the project once again. This book is the result of that entreaty. Weschler sets Sacks's brilliant table talk and extravagant personality in vivid relief, casting himself as a beanpole Sancho to Sacks's capacious Quixote. We see Sacks rowing and ranting and caring deeply; composing the essays that would form *The Man Who Mistook His Wife for a Hat*; recalling his turbulent drug-fueled younger days; helping his patients and exhausting his friends; and waging intellectual war against a medical and scientific establishment that failed to address his greatest concern: the spontaneous specificity of the individual human soul. And all the while he is pouring out a stream of glorious, ribald, hilarious, and often profound conversation that establishes him as one of the great talkers of the age. Here is the definitive portrait of Sacks as our preeminent romantic scientist, a self-described "clinical ontologist" whose entire practice revolved around the single fundamental question he effectively asked each of his patients: How are you? Which is to say, How do you be? A question which Weschler, with this book, turns back on the good doctor himself.

Oaxaca Journal - Oliver Sacks 2012-03-06

"I have been an inveterate keeper of journals since I was 14 especially at times of adventure and crisis and travel. Here, for the first time, such a journal made its way to publication, not that much changed from the raw, handwritten journal that I kept during my fascinated 9 days in Oaxaca." Dr. Oliver Sacks

Oliver Sacks is best known as an explorer of the human mind, a neurologist with a gift for the complex, insightful portrayals of people and their conditions that fuel the phenomenal success of his books. But he is also a card-carrying member of the American Fern Society, and since childhood has been fascinated by these primitive plants and their ability to survive and adapt. Now the bestselling author of *Awakenings* and *The Man Who Mistook His Wife for a Hat* brings his ceaseless curiosity and eye for the wondrous to the province of Oaxaca, Mexico. *Oaxaca Journal* is Sacks's spellbinding account of his trip with a group of fellow fern enthusiasts to the beautiful, history-steeped province of Oaxaca. Bringing together Sacks's passion for natural history and the richness of human culture with his penetrating curiosity and trammeling eye for detail, *Oaxaca Journal* is a captivating evocation of a places, its plants, its people and its myriad wonders.

Black Like Me - John Howard Griffin 2006-04-01

This American classic has been corrected from the original manuscripts and indexed, featuring historic photographs and an extensive biographical afterword.

Engaging Autism - Stanley I. Greenspan 2007-04-03

An essential guide to the highly recommended Floortime approach for treating children with any of the autism spectrum disorders (ASD). From the renowned child psychiatrist who developed the groundbreaking Floortime approach for children with autism spectrum disorder, *Engaging Autism* is a clear, compassionate road-map for parents. Unlike approaches that focus on changing specific behavior, Dr. Greenspan's program promotes the building blocks of healthy emotional and behavioral development, showing that children with ASD do not have a fixed, limited potential, and may often join their peers to lead full, healthy lives. With practical advice for every scenario you may face with your autistic child at any age -- including sensory craving, overactivity, avoidant behavior, eating, toilet training, developing social skills and

more -- *Engaging Autism* offers hope for families and redefines how we see children with ASD.

The Head Trip - Jeff Warren 2009-03-18

A world at once familiar and unimaginably strange exists all around us, and within us - it is the vast realm of consciousness. In *The Head Trip*, science journalist Jeff Warren explores twelve distinct, natural states of consciousness available to us in a twenty-four-hour day, each state offering its own kind of knowledge and insight - its own adventure. The hypnagogic state, when our minds hover between waking and sleeping, can be a rich source of creativity and even compassion. Then there's the Watch, an almost magical waking experience in the middle of the night that has been all but lost to electric light and modern sleep patterns. Daydreaming and trance, lucid dreaming, the Zone, and the Pure Conscious Event - from sleep laboratory to remote northern cabin, neurofeedback clinic to Buddhist retreat, Warren visits them all. Along the way, he talks to neuroscientists, chronobiologists, anthropologists, monks, and many others who illuminate his stories with cutting-edge science and age-old wisdom. On this trip, all are welcome and no drugs are required: all you need to pack are a functioning cerebrum and an open mind. Replete with stylish graphics and brightened by comic panels conceived and drawn by the author, *The Head Trip* is an instant classic, a brilliant and original description of the shifting experience of consciousness that's also a practical guide to enhancing creativity and mental health. This book does not just inform and entertain - it shows how every one of us can expand upon the ways we experience being alive.

A Leg to Stand On - Oliver Sacks 1998-04-29

A neurologist describes his struggle to recover from a mountain climbing accident and examines the effects of a neural injury on the sense of self

An Anthropologist on Mars - Oliver Sacks 1995

'An inexhaustible tourist at the farther reaches of the mind, Sacks presents, in sparse, unsentimental prose, the stories of seven of his patients. The result is as rich, vivid and compelling as any collection of short fictional stories' *Independent on Sunday*

As with his previous bestseller, *The Man Who Mistook His Wife for a Hat*, Oliver Sacks uses case studies to illustrate the myriad ways in which neurological conditions can affect our sense of self, our experience of the world, and how we relate to those around us. Writing with his trademark blend of scientific rigour and human compassion, he describes patients such as the colour-blind painter or the surgeon with compulsive tics that disappear in the operating theatre; patients for whom disorientation and alienation - but also adaptation - are inescapable facts of life. 'Sacks' great gift is his capacity to place himself in the position of his subjects, to see the world the way they see it and to empathize with their condition with great compassion but without patronage or pity' *Daily Telegraph*

'Writing simply and beautifully, Sacks uses individual case histories to reveal the infinite complexities of the human mind' *Daily Mail*

Sway - Ori Brafman 2009-06-02

A fascinating journey into the hidden psychological influences that derail our decision-making, *Sway* will change the way you think about the way you think. Why is it so difficult to sell a plummeting stock or end a doomed relationship? Why do we listen to advice just because it came from someone "important"? Why are we more likely to fall in love when there's danger involved? In *Sway*, renowned organizational thinker Ori Brafman and his brother, psychologist Rom Brafman, answer all these questions and more. Drawing on cutting-edge research from the fields of social psychology, behavioral economics, and organizational behavior, *Sway* reveals dynamic forces that influence every aspect of our personal and business lives, including loss aversion (our tendency to go to great lengths to avoid perceived losses), the diagnosis bias (our inability to reevaluate our initial diagnosis of a person or situation), and the "chameleon effect" (our tendency to take on characteristics that have been arbitrarily assigned to us). *Sway* introduces us to the Harvard Business School professor who got his students to pay \$204 for a \$20 bill, the head of airline safety whose disregard for his years of training led to the transformation of an entire industry, and the football coach who turned conventional strategy on its head to lead his team to victory. We also learn the curse of the NBA draft, discover why interviews are a terrible way to gauge future job performance, and go inside a session with the Supreme Court to see how the world's most powerful justices avoid the dangers of group dynamics. Every once in a while, a book comes along that not only challenges our views of the world but changes the way we think. In *Sway*, Ori and Rom Brafman not only uncover rational explanations for a wide variety of irrational behaviors but also point readers toward ways to avoid succumbing to their pull.

The Art of the State - Christopher Hood 2000

Bringing a new conceptual framework and valuable historical perspective to various approaches to public management, this study uses cultural theory to show why ideas about how to manage government are inherently plural and contradictory.

Why Is It Always About You? - Sandy Hotchkiss 2008-06-20

In this groundbreaking book -- the first popular book on narcissism in more than a decade -- clinical social worker and psychotherapist Sandy Hotchkiss shows you how to cope with controlling, egotistical people who are incapable of the fundamental give-and-take that sustains healthy relationships. Exploring how individuals come to have this shortcoming, why you get drawn into their perilous orbit, and what you can do to break free, Hotchkiss describes the "Seven Deadly Sins of Narcissism" and their origins. You will learn to recognize these hallmarks of unhealthy narcissism -- Shamelessness, Magical Thinking, Arrogance, Envy, Entitlement, Exploitation, Bad Boundaries -- and to understand the roles that parenting and culture play in their creation. Whether the

narcissist in question is a coworker, spouse, parent, or child, *Why Is It Always About You?* provides abundant practical advice for anyone struggling to break narcissism's insidious spread to the next generation, and for anyone who encounters narcissists in everyday life.

An Anthropologist on Mars - Oliver Sacks 2011-06-16

As with his previous bestseller, *The Man Who Mistook His Wife for a Hat*, in *An Anthropologist on Mars* Oliver Sacks uses case studies to illustrate the myriad ways in which neurological conditions can affect our sense of self, our experience of the world, and how we relate to those around us. Writing with his trademark blend of scientific rigour and human compassion, he describes patients such as the colour-blind painter or the surgeon with compulsive tics that disappear in the operating theatre; patients for whom disorientation and alienation -- but also adaptation -- are inescapable facts of life. 'An inexhaustible tourist at the farther reaches of the mind, Sacks presents, in sparse, unsentimental prose, the stories of seven of his patients. The result is as rich, vivid and compelling as any collection of short fictional stories' -- Independent on Sunday
